Folio

User Manual

Upload. Understand. Practise. Revisit.

A practical illustrated guide to the document vault, source-linked answers, study spaces, quizzes, revision cards and deadlines.

Edition
13 October 2026
Native Android app and responsive web workspace

Before You Start
Use an account and email inbox you control. Internet access is needed for account access, cloud uploads and AI generation. Check important facts and dates against the original source.

Examples use a fictional demonstration account and synthetic documents. Native screenshots were captured in an Android emulator; they do not imply physical iPhone testing. Authentication forms illustrate the screens, not live email delivery.

Open the web app: folio-vn1g-two.vercel.app

Contents

Choose a workflow. Each illustration comes from the supplied screenshot folder.

Help, backups and limits 32

01. Sign In

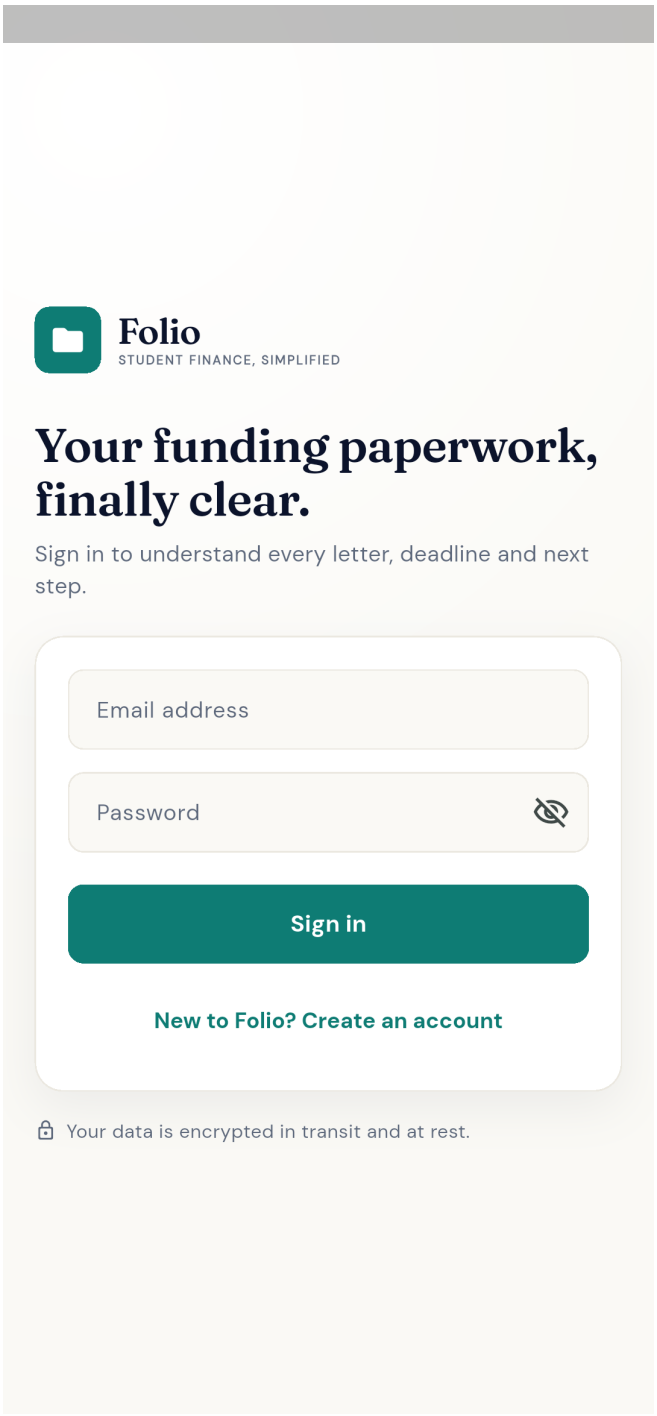

Figure 1. Native Android

Start with your Folio account.

1. Enter your email address and password, then tap Sign in.

2. Use the eye icon to check your password before submitting.

3. Complete the verification-code step when prompted.

Keep in Mind

On the web, a registered passkey can be used instead of password sign-in.

02. Create an Account

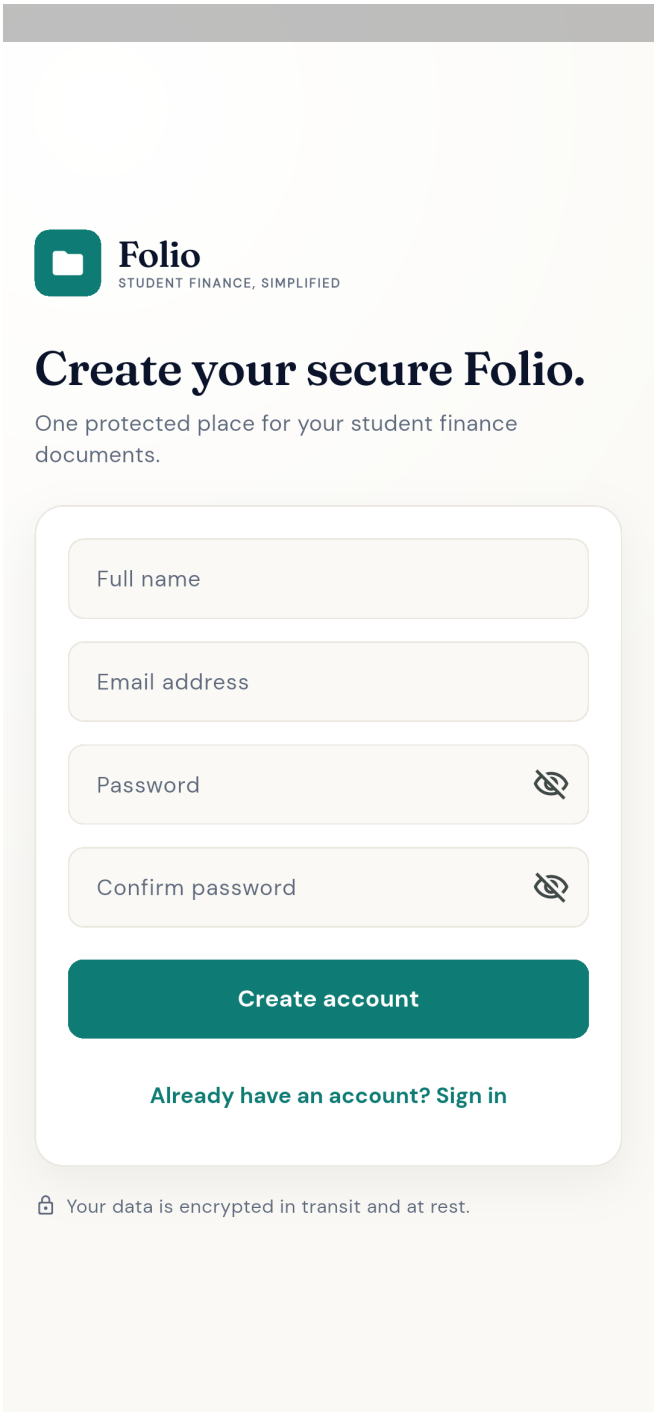

Figure 2. Native Android

Use an email inbox you can access.

1. Choose Create an account from the sign-in screen.

2. Enter your name, email and a password of at least 10 characters. Confirm the password in the mobile app.

3. Submit the form and follow the email-verification prompt.

Keep in Mind

Keep your password and verification codes private. Example accounts in this guide are fictional.

03. Verify Your Email

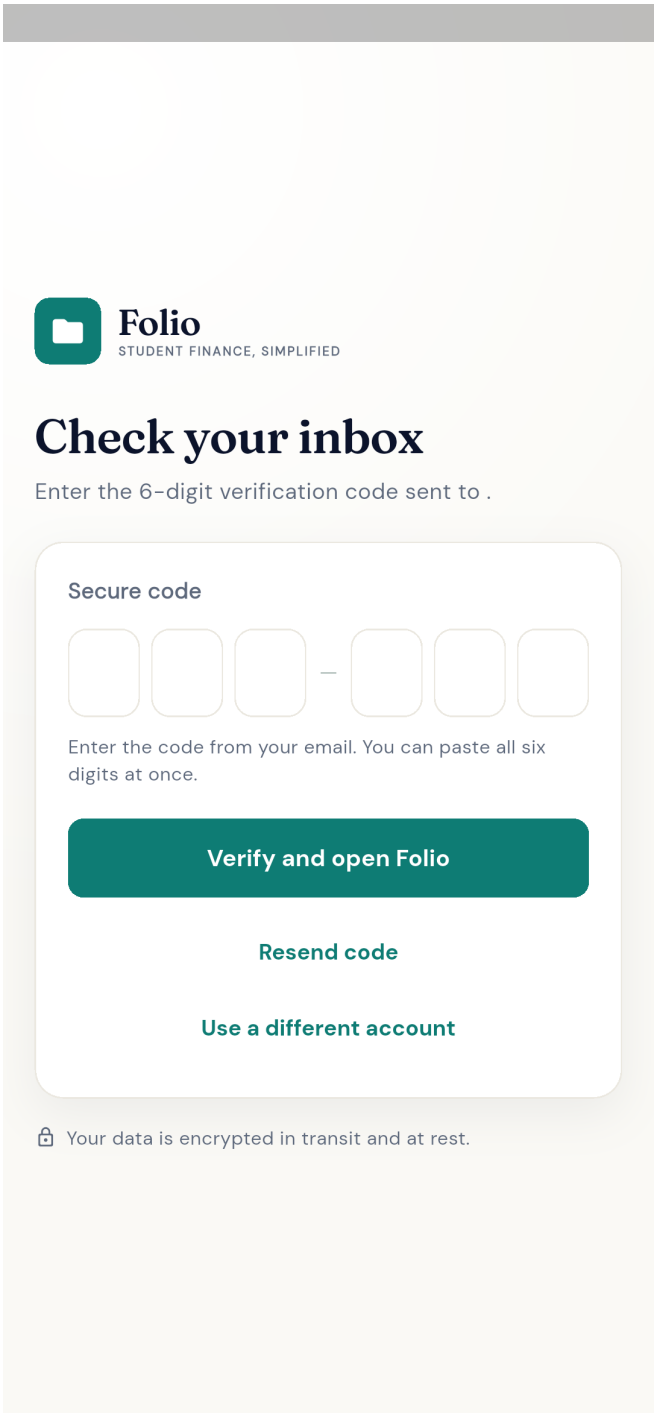

Figure 3. Native Android

The verification form accepts a six-digit code.

1. Find the latest Folio code in your email inbox. Check spam if necessary.

2. Enter or paste all six digits, then choose Verify and open Folio.

3. Use Resend code when available, or Use a different account to return to sign-in.

Keep in Mind

The recipient is omitted in this illustration. These screenshots show the form, not a test of email delivery.

04. Find Your Way Around

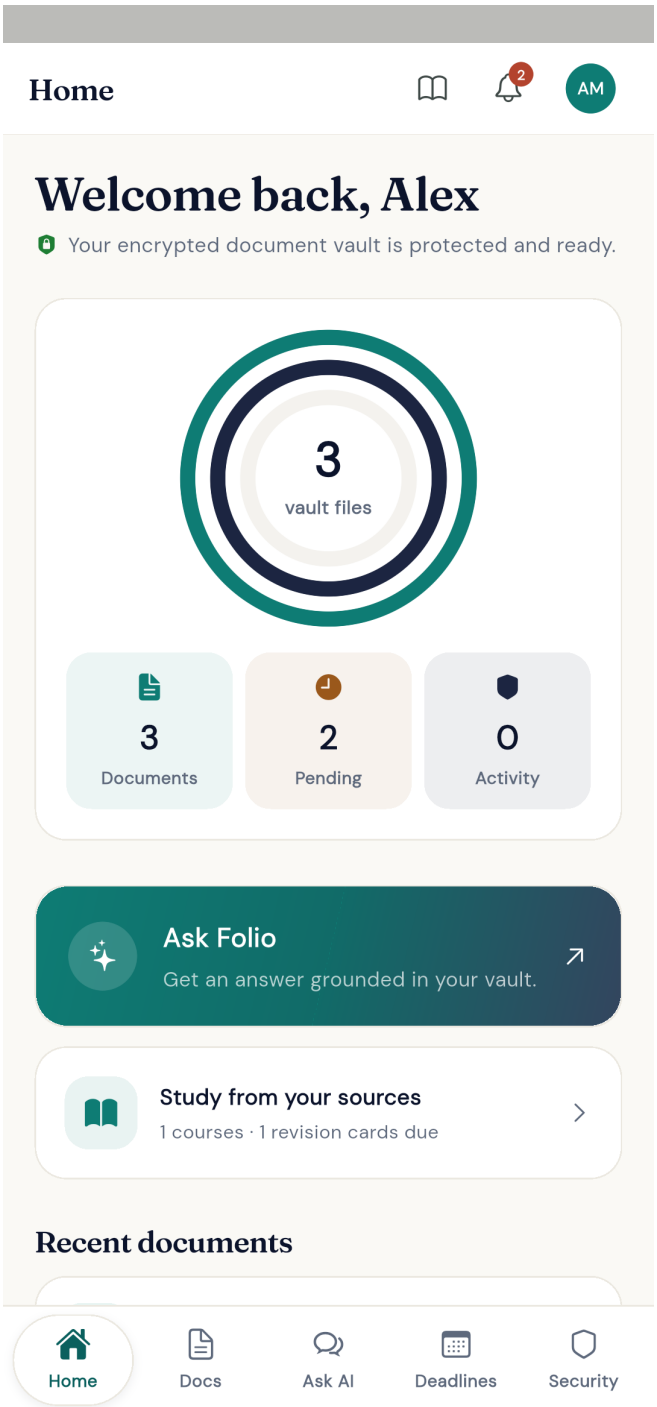

Figure 4. Native Android

Home brings your documents and upcoming work together.

1. Open a recent document, Ask Folio, or Study from your sources.

2. Use Docs, Ask AI, Deadlines and Security in the bottom navigation.

3. The book icon also opens Study. Open your account from the initials icon.

Keep in Mind

Counts reflect this account and its saved workspace. They are not institution records.

05. Organise the Vault

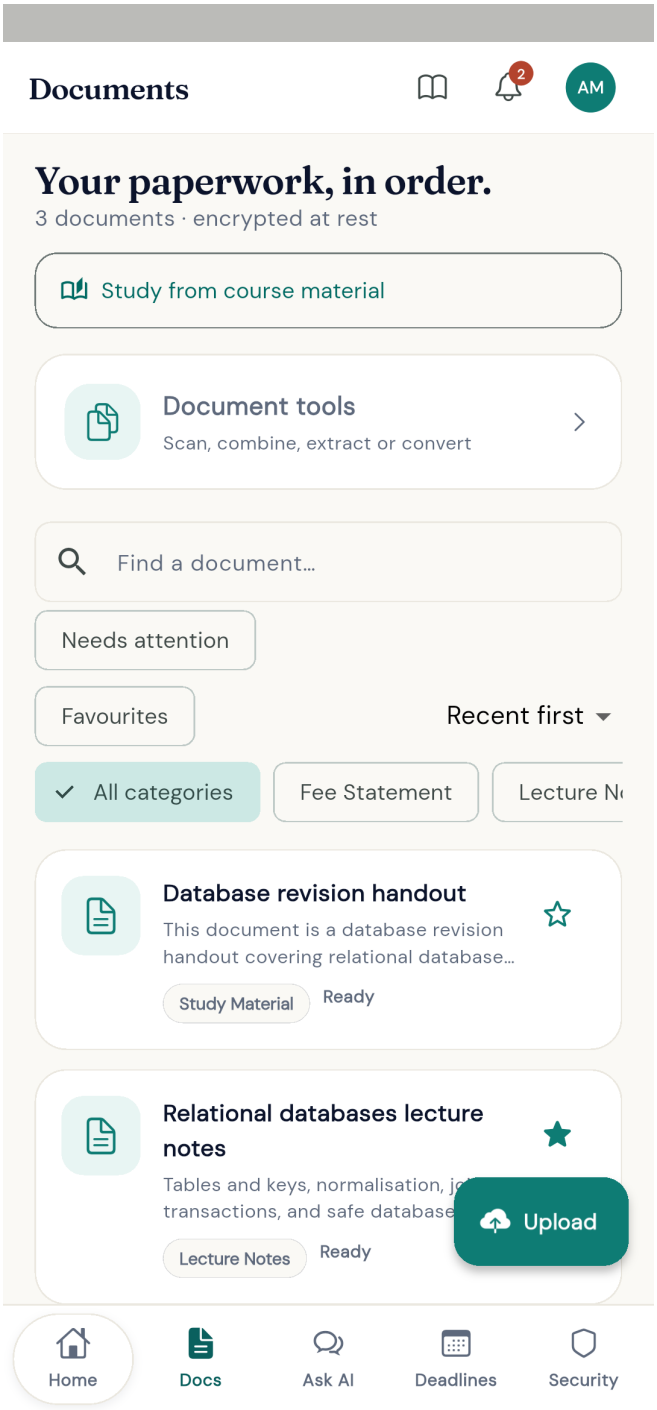

Figure 5. Native Android

Find the document you need before reading or studying.

1. Search for a title or source text. Narrow the list by category.

2. Use Favourites, Needs attention and the sort menu to change the list.

3. Tap a document to open its details. Upload adds a new original file.

Keep in Mind

Ready means readable processing has completed. Check extracted text against the original when accuracy matters.

06. Inspect Document Details

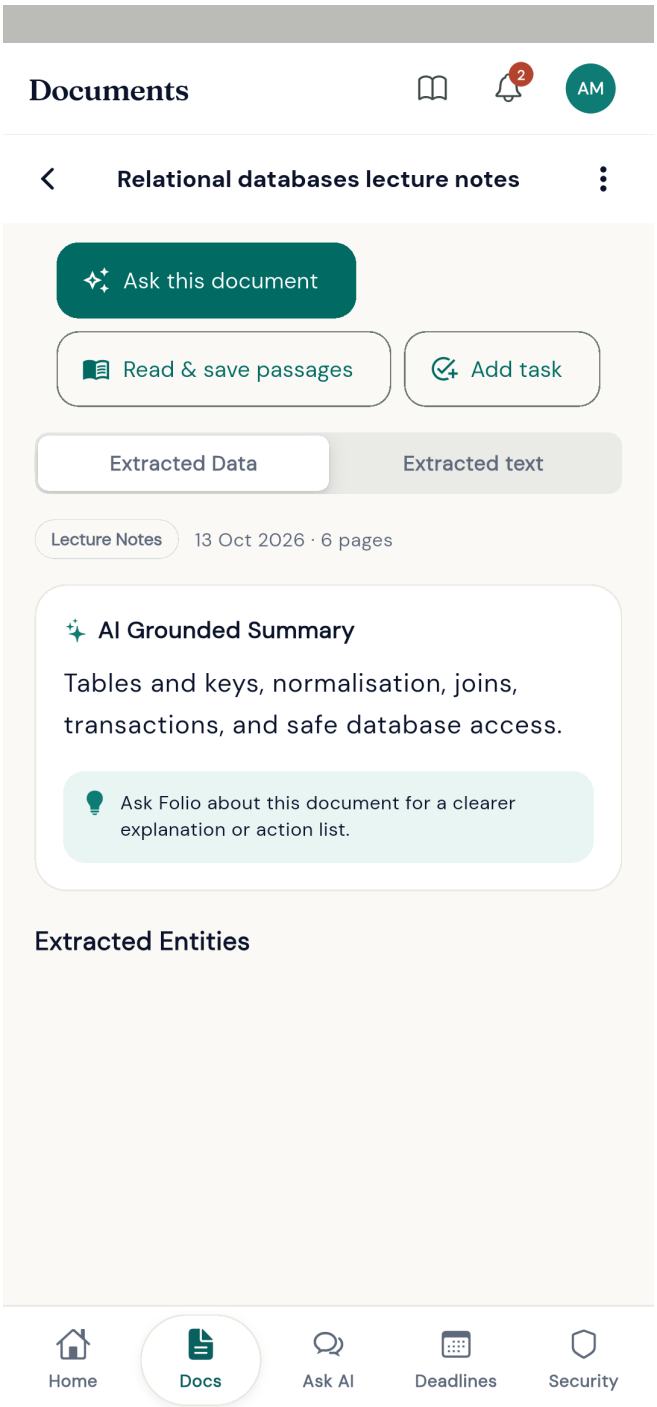

Figure 6. Native Android

The details view connects a document to its next actions.

1. Review the summary and any extracted details.

2. Switch between Extracted Data and Extracted text.

3. Choose Ask this document, Read & save passages, or Add task.

Keep in Mind

Use the document menu to edit its title/category or manage the original. Summaries are assistance, not official decisions.

07. Read and Save a Passage

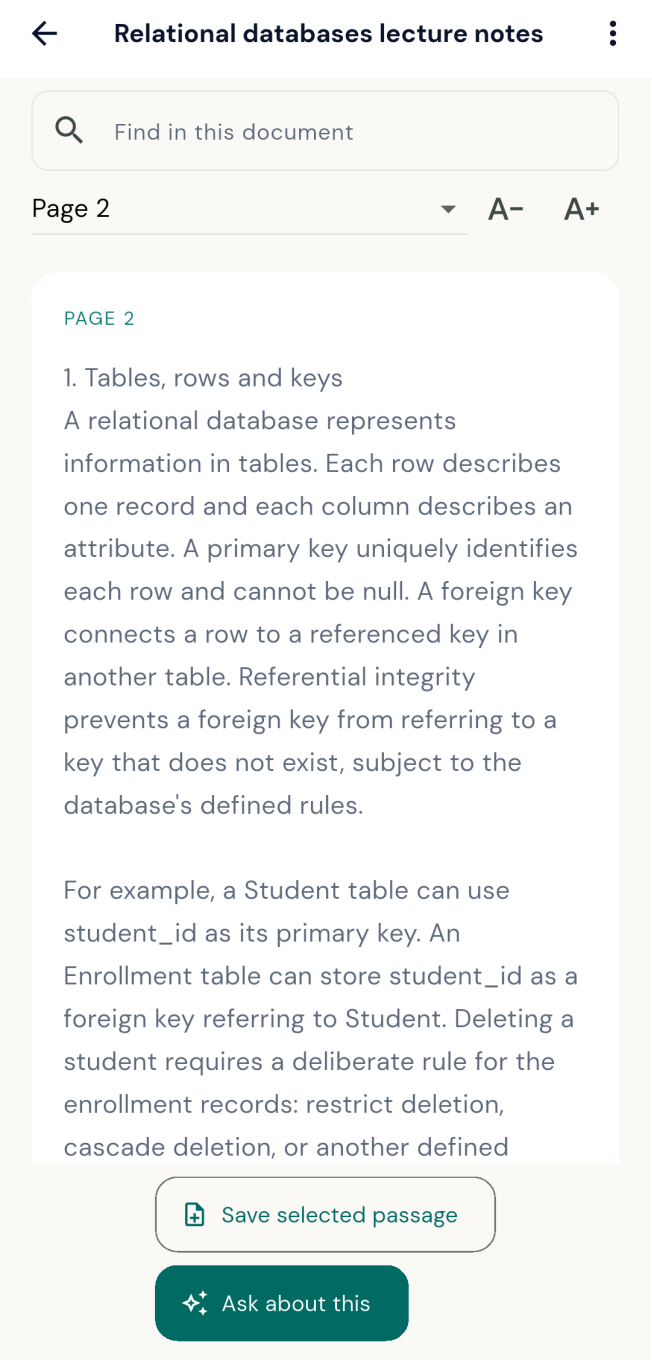

Figure 7. Native Android

The reader keeps extracted text connected to its source page.

1. Use Find in this document to locate a term. Change pages with the page selector.

2. Use A− and A+ to adjust reading size. Select the passage you want to keep.

3. Choose Save selected passage for a note, or Ask about this for an explanation.

Keep in Mind

If the source page is unavailable, Folio does not invent a page number. Use the original file to confirm the location.

08. Create a Study Space

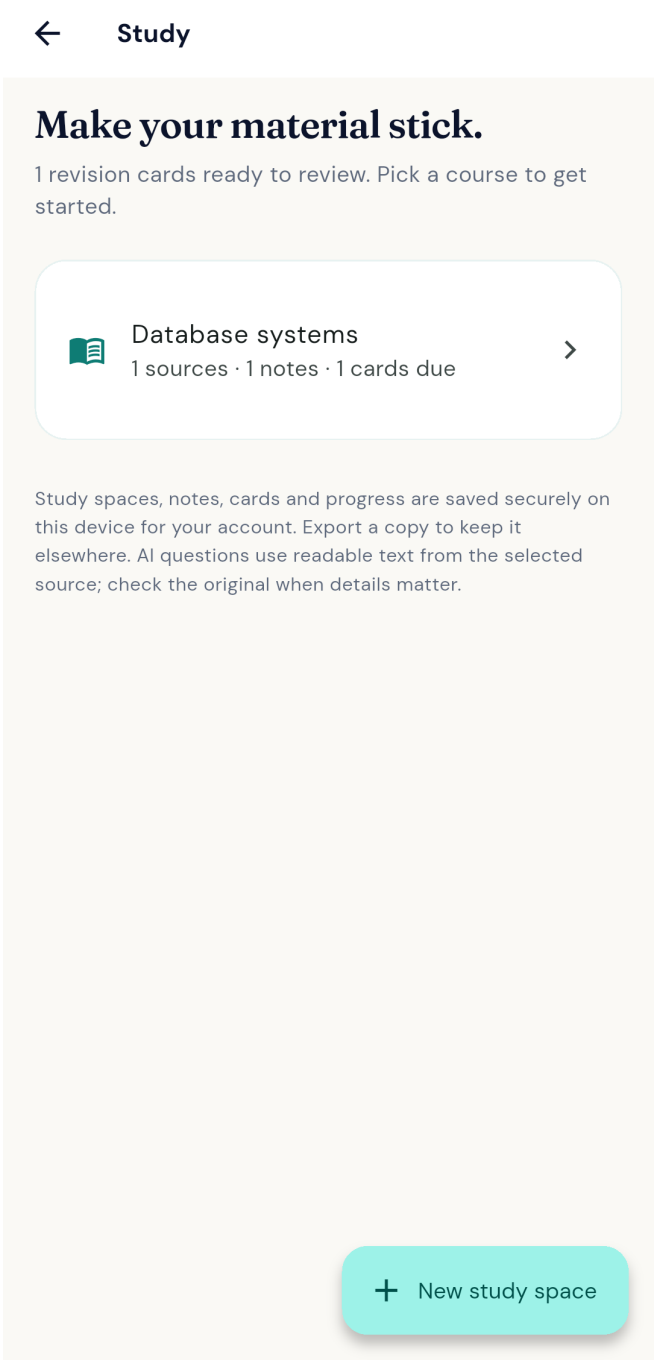

Figure 8. Native Android

Keep a course or topic together in one study space.

1. Open Study from Home or the book icon.

2. Choose New study space and enter a clear course name.

3. Open the space to add sources, notes and revision cards.

Keep in Mind

Study spaces are saved on this device for your account. Export material you need outside the app.

09. Add Course Sources

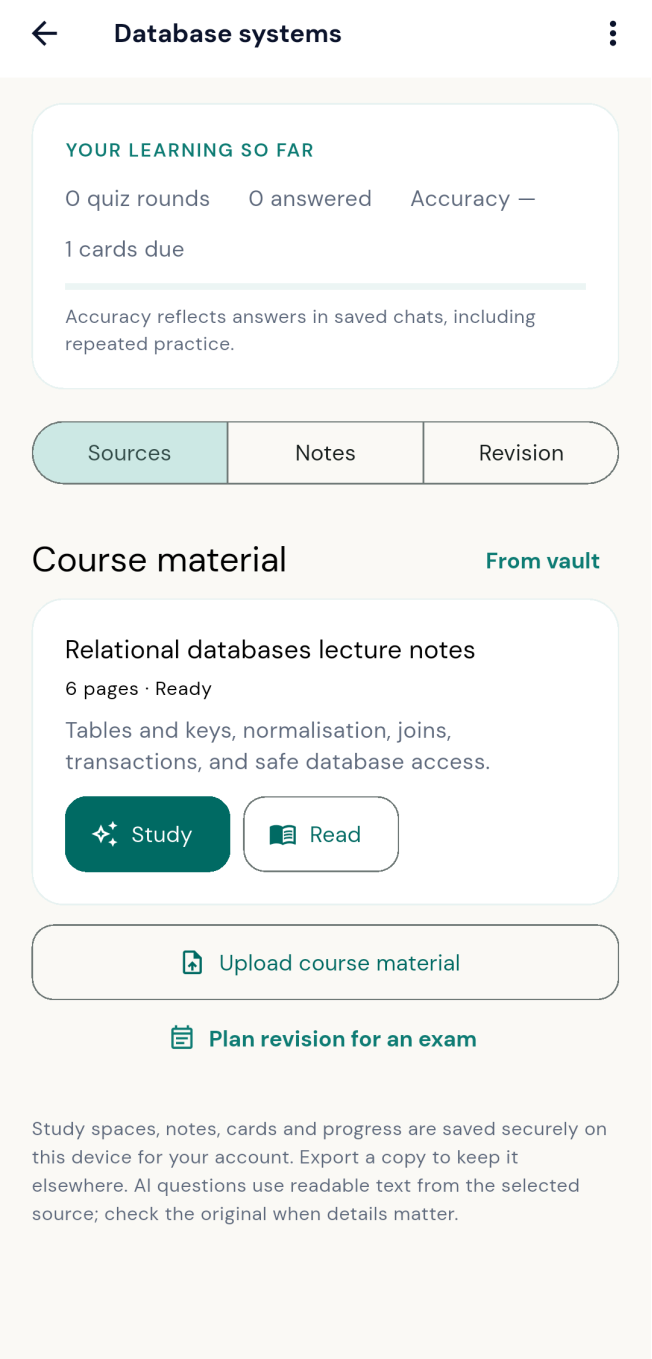

Figure 9. Native Android

Start studying from the documents you actually have.

1. Use From vault to attach existing documents, or Upload course material for a new source.

2. Choose Read to inspect a source, or Study to open its source-scoped chat.

3. Use Plan revision for an exam to create dated revision tasks.

Keep in Mind

Removing a source from a course does not delete the original from the vault.

10. Keep Study Notes

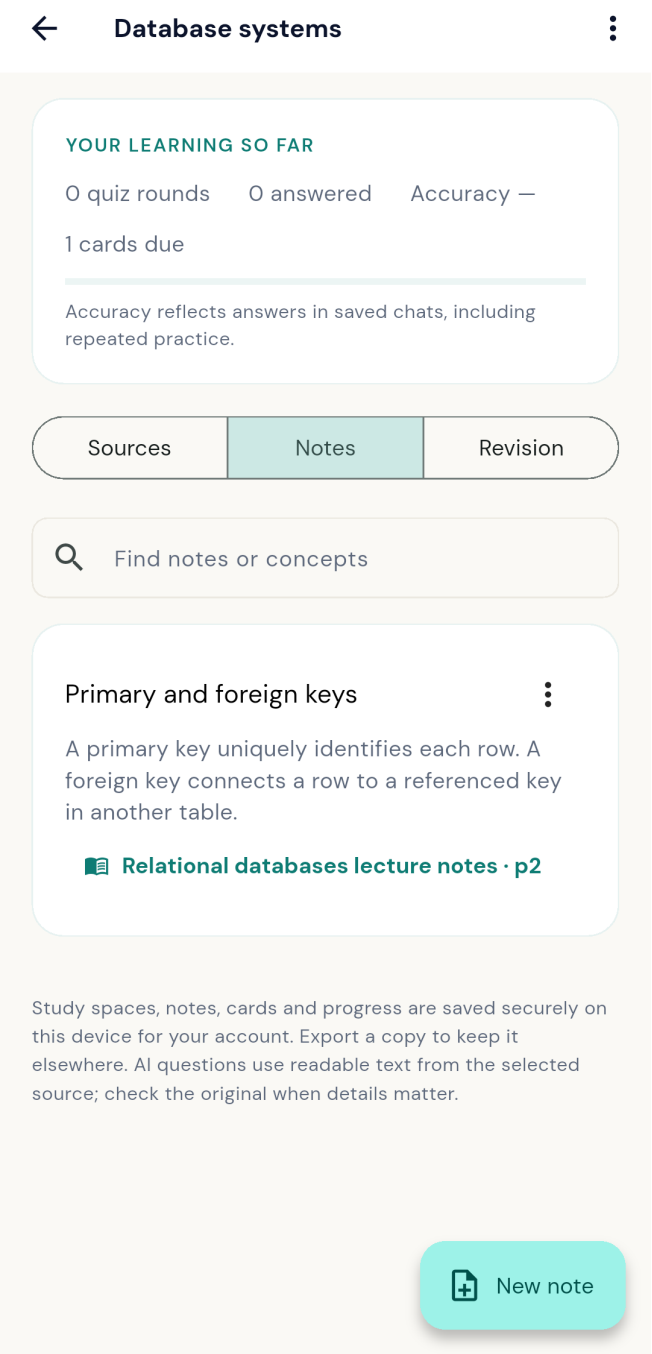

Figure 10. Native Android

Save explanations and your own understanding together.

1. Open the Notes tab, then choose New note.

2. Enter a title and note text. Preserve the source and page when the note comes from a document.

3. Search notes or use a note menu to edit, delete or make a revision card.

Keep in Mind

Export a study space to keep a separate copy. A personal note is not automatically a source-backed claim.

11. Build a Revision Deck

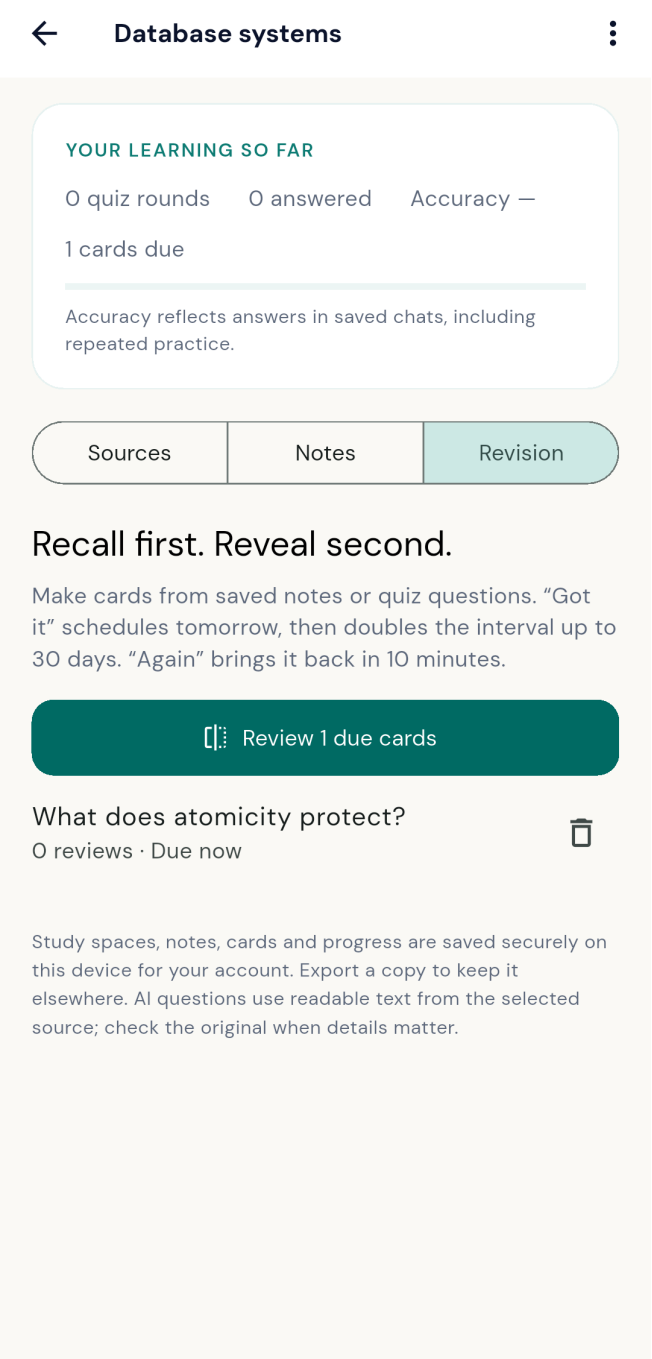

Figure 11. Native Android

Turn notes and quiz explanations into recall practice.

1. Make a card from a saved note or a quiz question.

2. Open Revision and choose Review due cards. Recall the answer before revealing it.

3. Rate the card honestly: Again brings it back in 10 minutes; Got it starts with tomorrow.

Keep in Mind

Successful reviews extend the interval, up to 30 days. The schedule belongs to this local workspace.

12. Set Up an AI Quiz

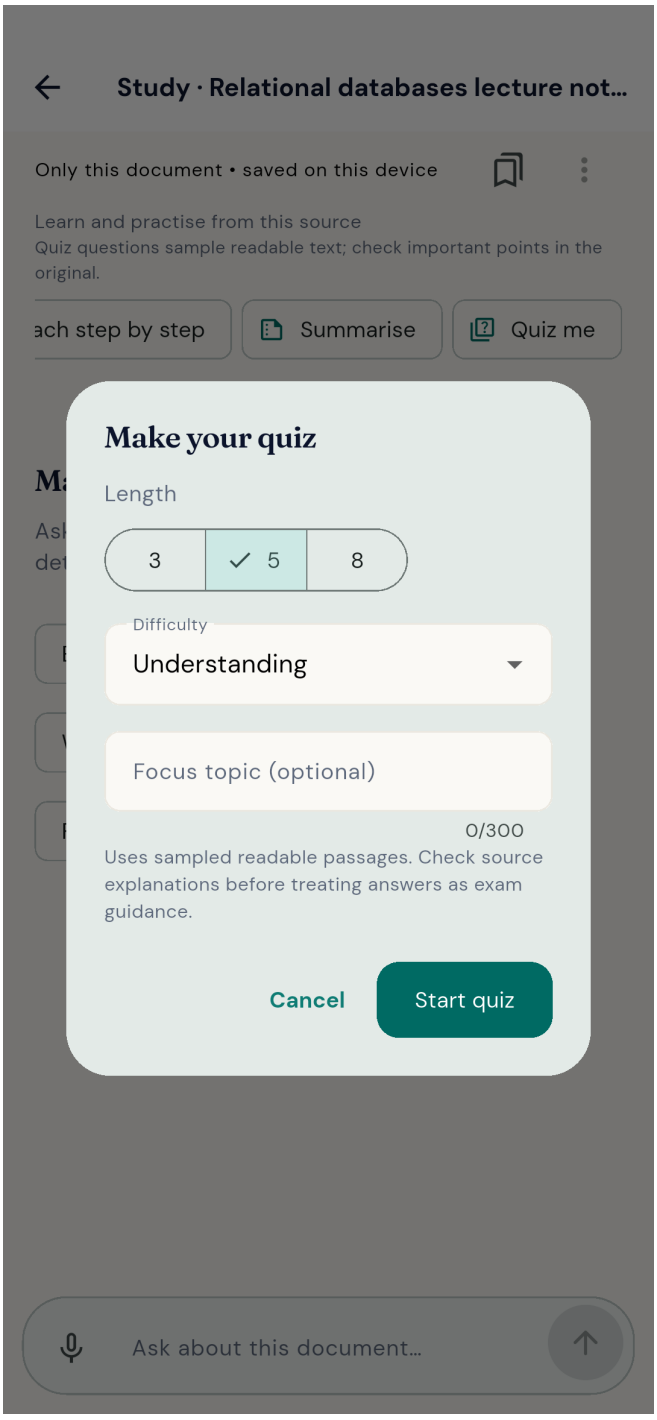

Figure 12. Native Android

Make a practice round from one readable source.

1. Open a course source in Study chat and choose Quiz me. Scroll the action row if needed.

2. Choose 3, 5 or 8 questions and a difficulty. Add a focus topic if useful.

3. Tap Start quiz and wait for generation. If it fails, retry without re-uploading the source.

Keep in Mind

Questions sample readable passages. A quiz is not a guarantee that every page or exam topic is covered.

13. Answer a Quiz Question

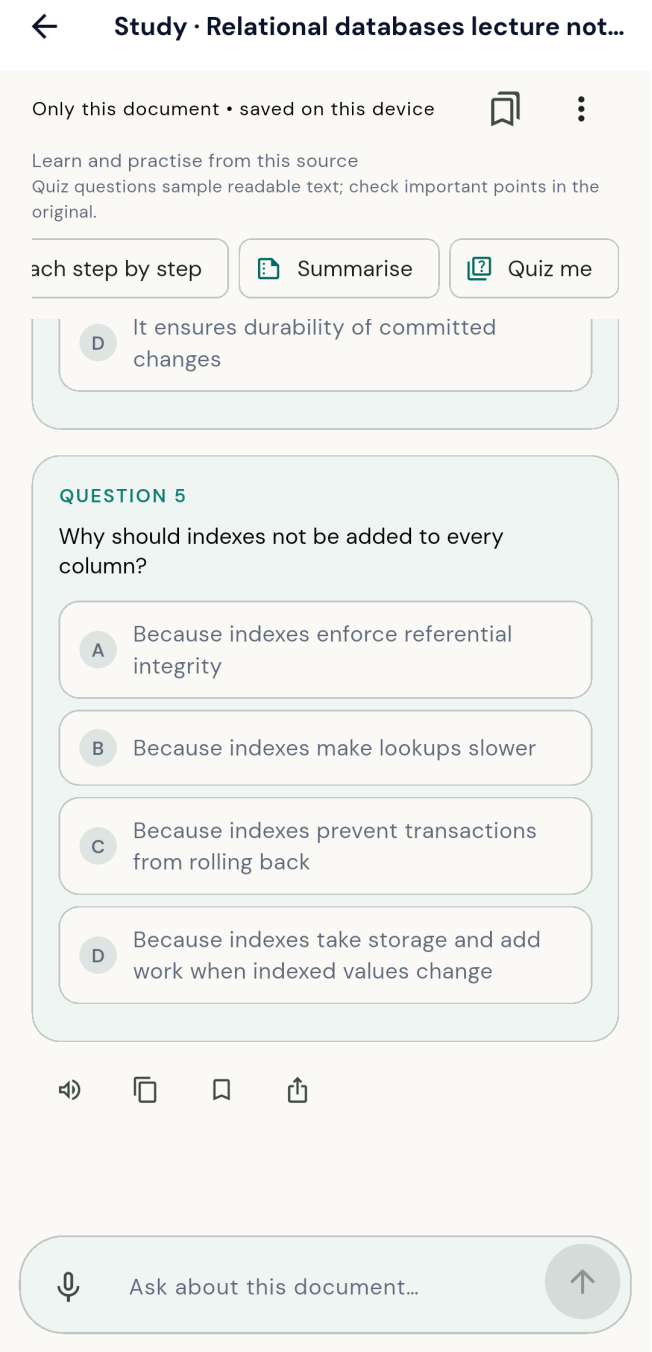

Figure 13. Native Android

Each question has four choices and one recorded selection.

1. Read the question and compare all four options.

2. Tap the answer you believe is correct. Your selection is then locked for that round.

3. Continue through the remaining questions, scrolling as needed.

Keep in Mind

Folio checks question structure and source excerpts before showing a generated quiz. Review important explanations yourself.

14. Check Quiz Feedback

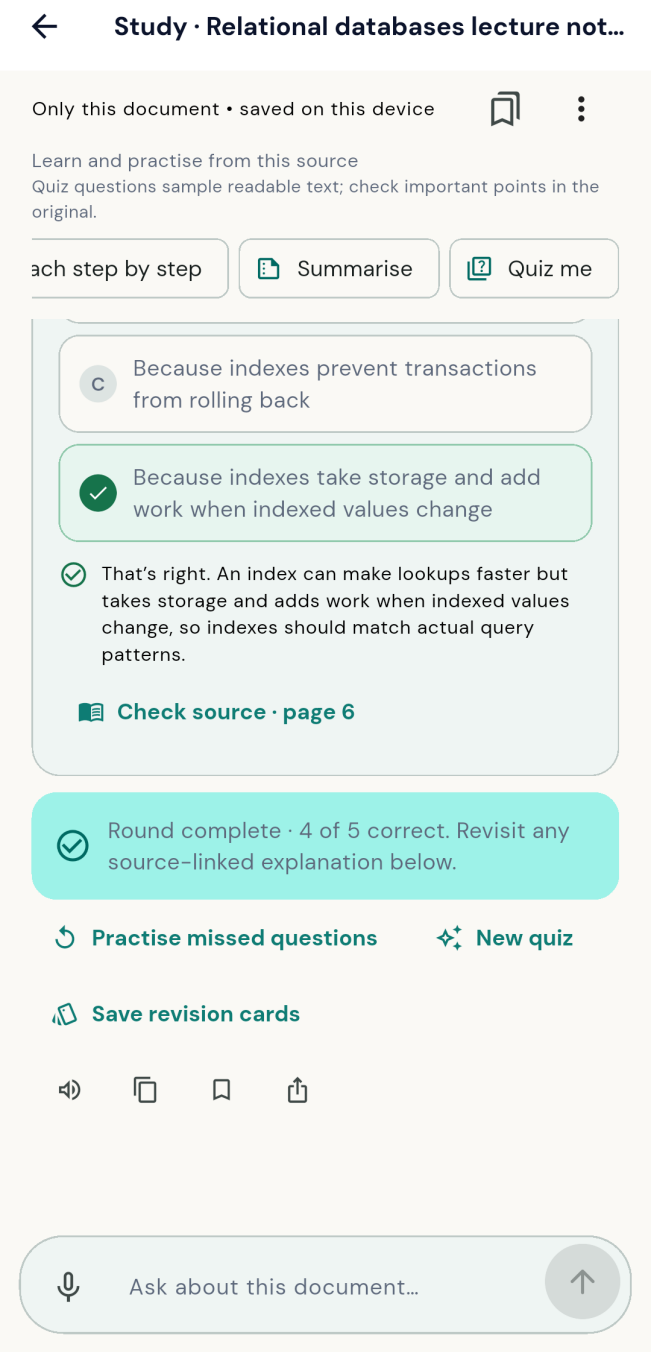

Figure 14. Native Android

Use the explanation to understand the result.

1. Review the highlighted answer and the explanation after selecting a choice.

2. Choose Check source to open the supporting document page.

3. Save useful questions as revision cards for later practice.

Keep in Mind

The original source is the reference. Generated explanations can still require human review.

15. Review Results and Retry

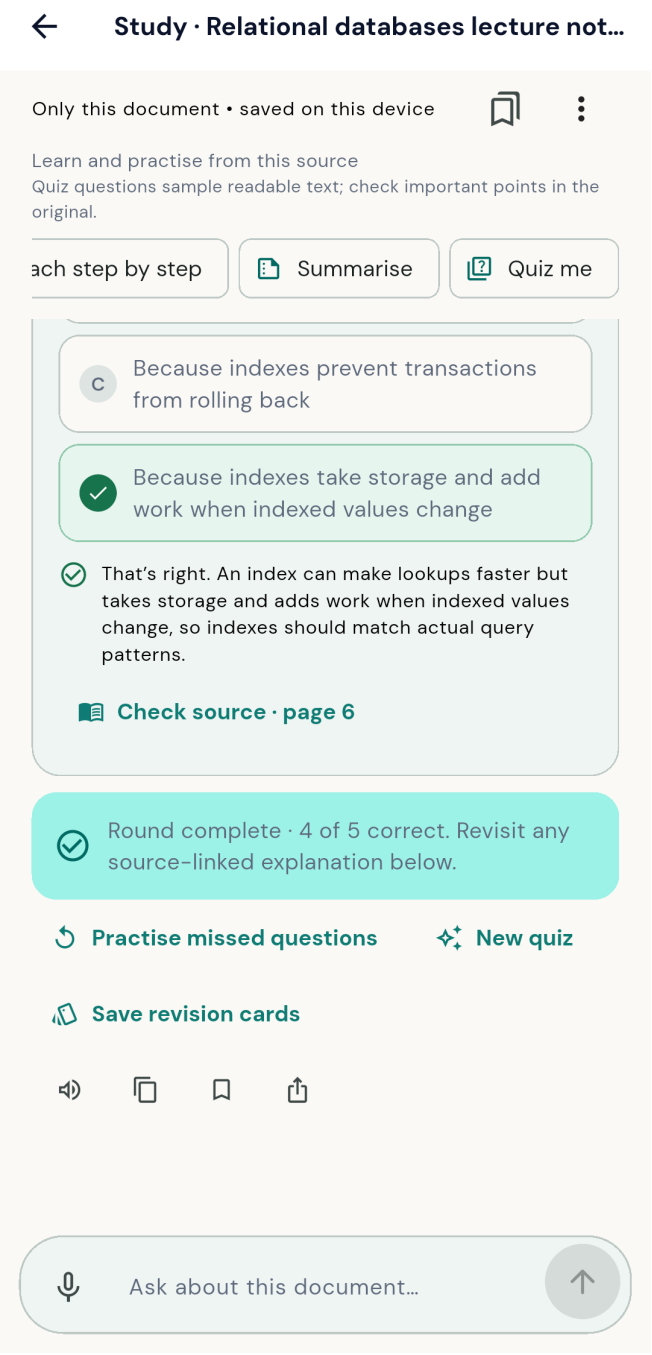

Figure 15. Native Android

The completed round shows your recorded score.

1. Review Round complete and the number answered correctly.

2. Choose Practise missed questions to focus on incorrect answers, or New quiz for another round.

3. Save revision cards to revisit concepts in the course deck.

Keep in Mind

Practice scores describe these saved attempts. They are not grades or an assessment of complete course mastery.

16. Track Document Deadlines

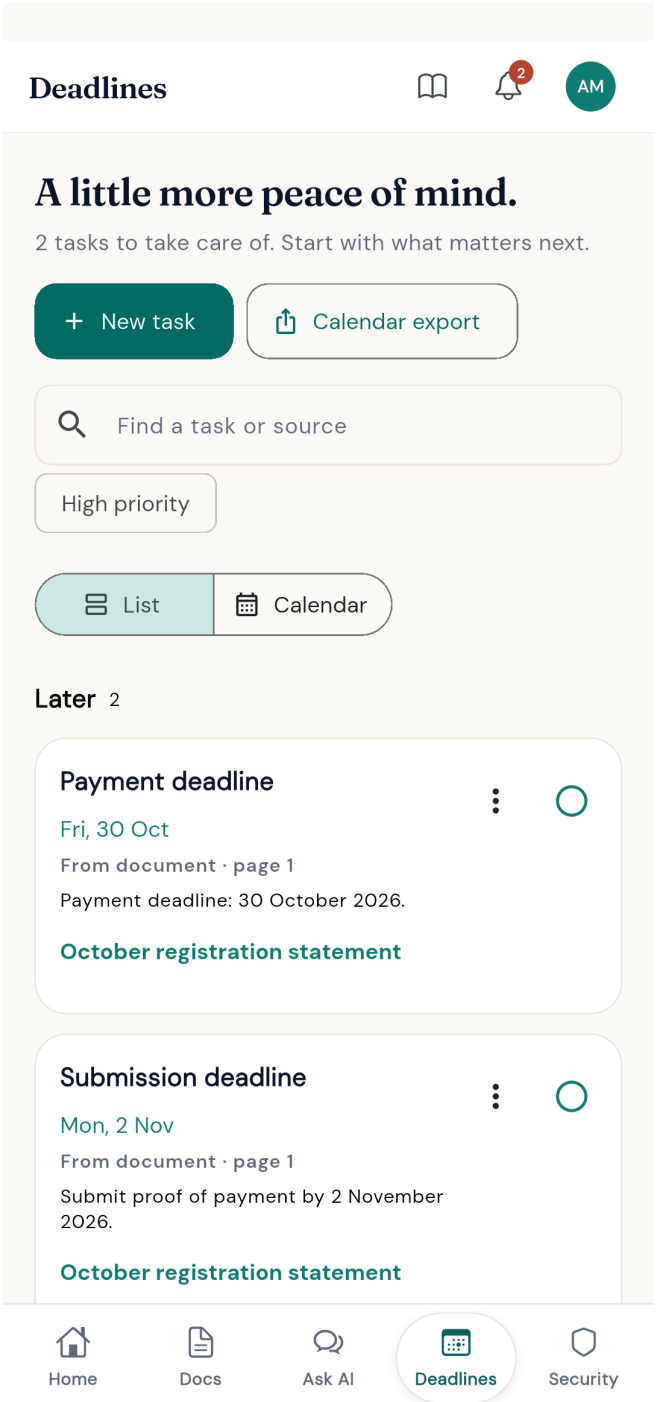

Figure 16. Native Android

Keep explicit source deadlines alongside personal tasks.

1. Open Deadlines and review the task title, date and priority.

2. Open the source link and excerpt to check an imported date. Resolve ambiguous dates before relying on them.

3. Mark work complete, or use the task menu to edit, postpone or delete it.

Keep in Mind

Payment and submission are separate actions in this example. Always verify dates with the original document or institution.

17. Use the Calendar

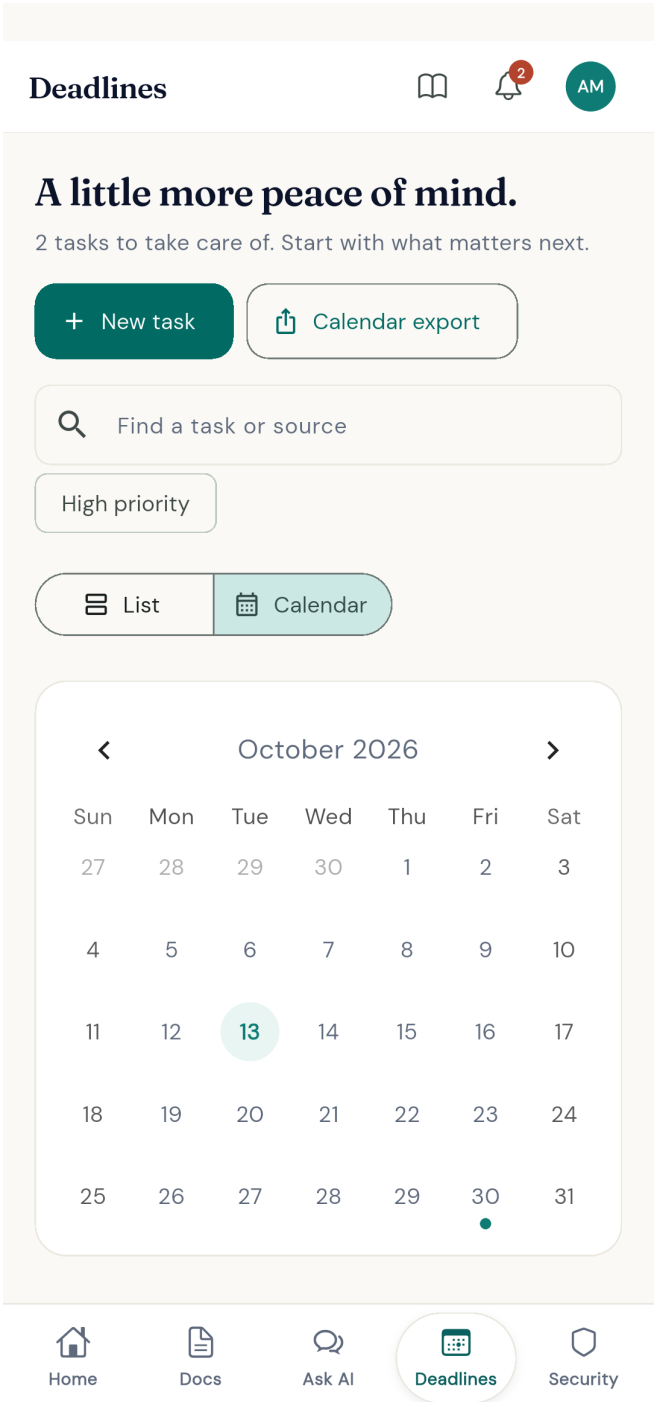

Figure 17. Native Android

See tasks by date instead of as a list.

1. Switch from List to Calendar.

2. Use the month arrows and select a day with a task marker.

3. Use Calendar export to create an ICS file, then import it into your calendar app.

Keep in Mind

Export is a file transfer, not continuous calendar sync. Folio tasks alone do not guarantee system notifications.

18. Create or Edit a Task

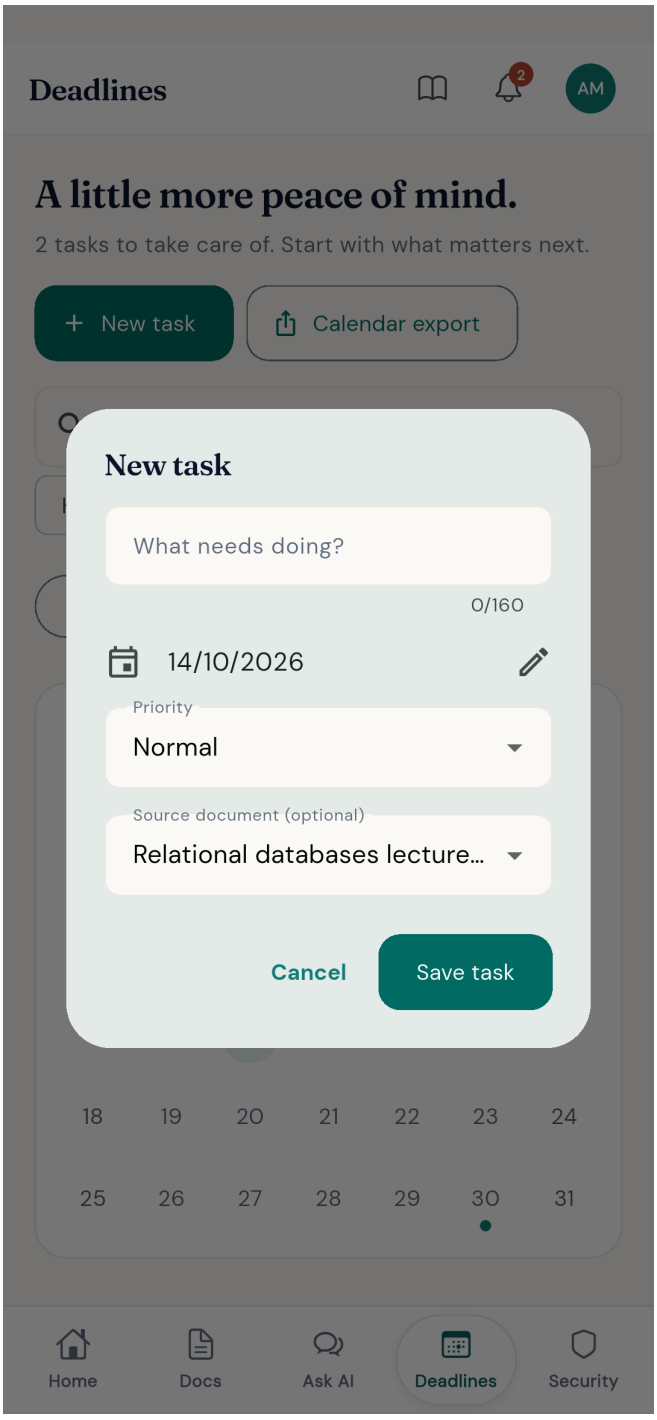

Figure 18. Native Android

Give each task a clear action and due date.

1. Choose New task, or open an existing task for editing.

2. Enter what needs doing, choose a date and set its priority.

3. Attach a source document if relevant, then save.

Keep in Mind

A manually entered date is your choice. It is not automatically a confirmed document deadline.

19. Protect the Mobile Workspace

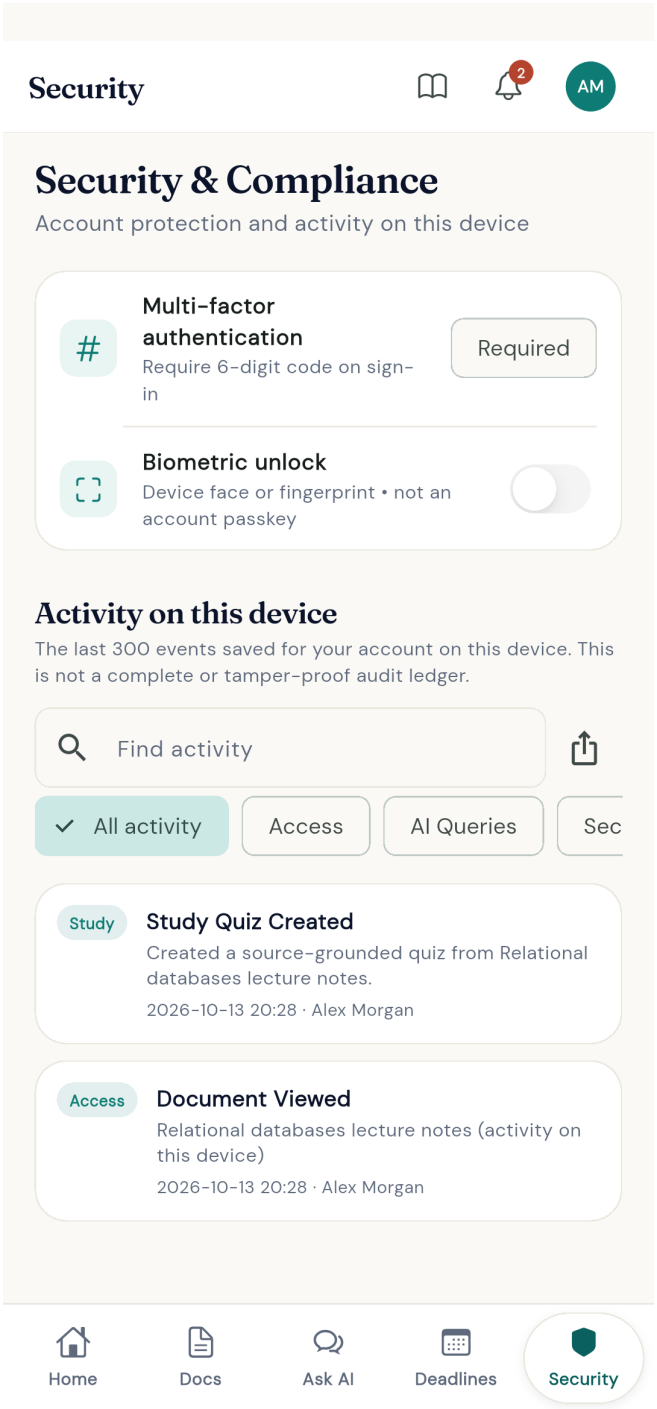

Figure 19. Native Android

Account access and device unlocking are different controls.

1. Review the required email-verification setting.

2. Enable Biometric unlock on a supported device if you want a local app lock.

3. Search or export Activity on this device to review recent actions.

Keep in Mind

Biometric unlock is not a registered account passkey. Local activity contains up to 300 events and is not a tamper-proof audit ledger.

20. Prepare Documents on Mobile

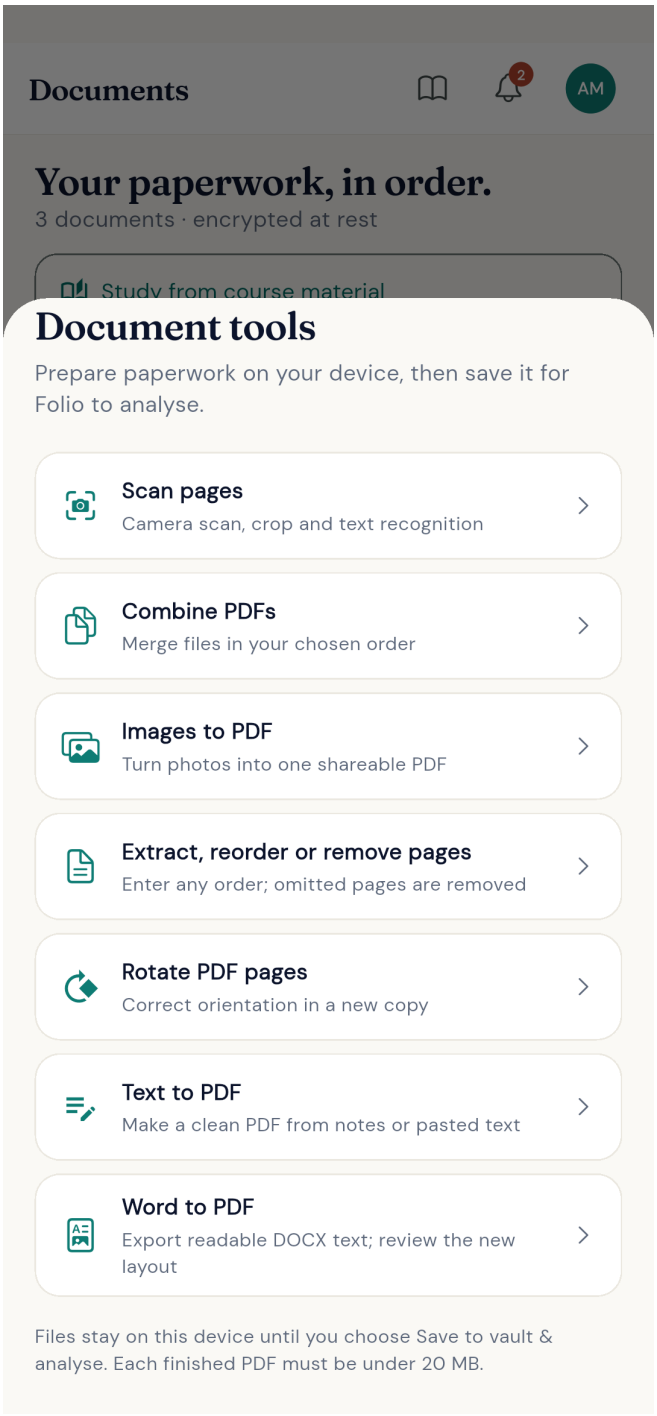

Figure 20. Native Android

Prepare a new file without changing the original.

1. Open Document tools in the vault. Choose scanning, combining, images, pages, rotation, text or Word conversion.

2. Choose input files and check their order or selected pages before creating the PDF.

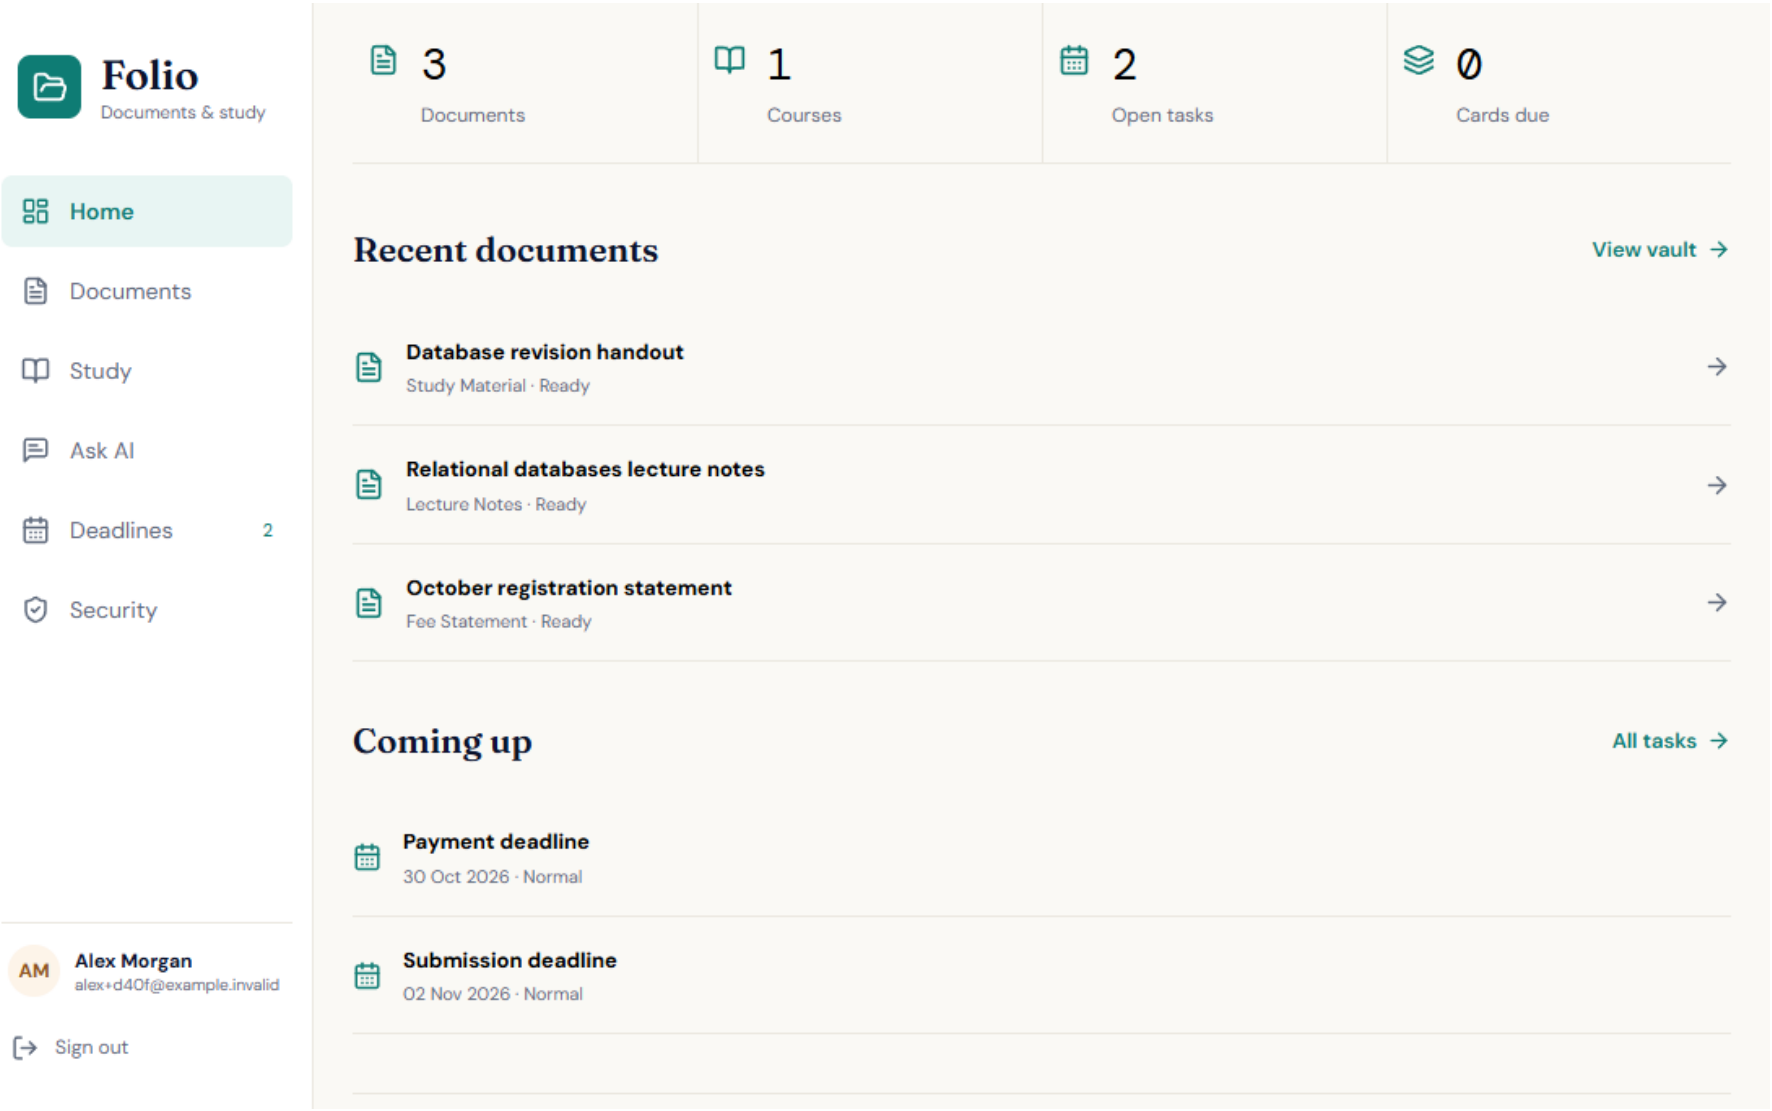

3. Review the result, then share/save it or choose Save to vault & analyse.

Keep in Mind

Word conversion uses readable paragraphs, not full Word layout. Camera/OCR availability and permissions depend on the device.

21. Use the Web Workspace

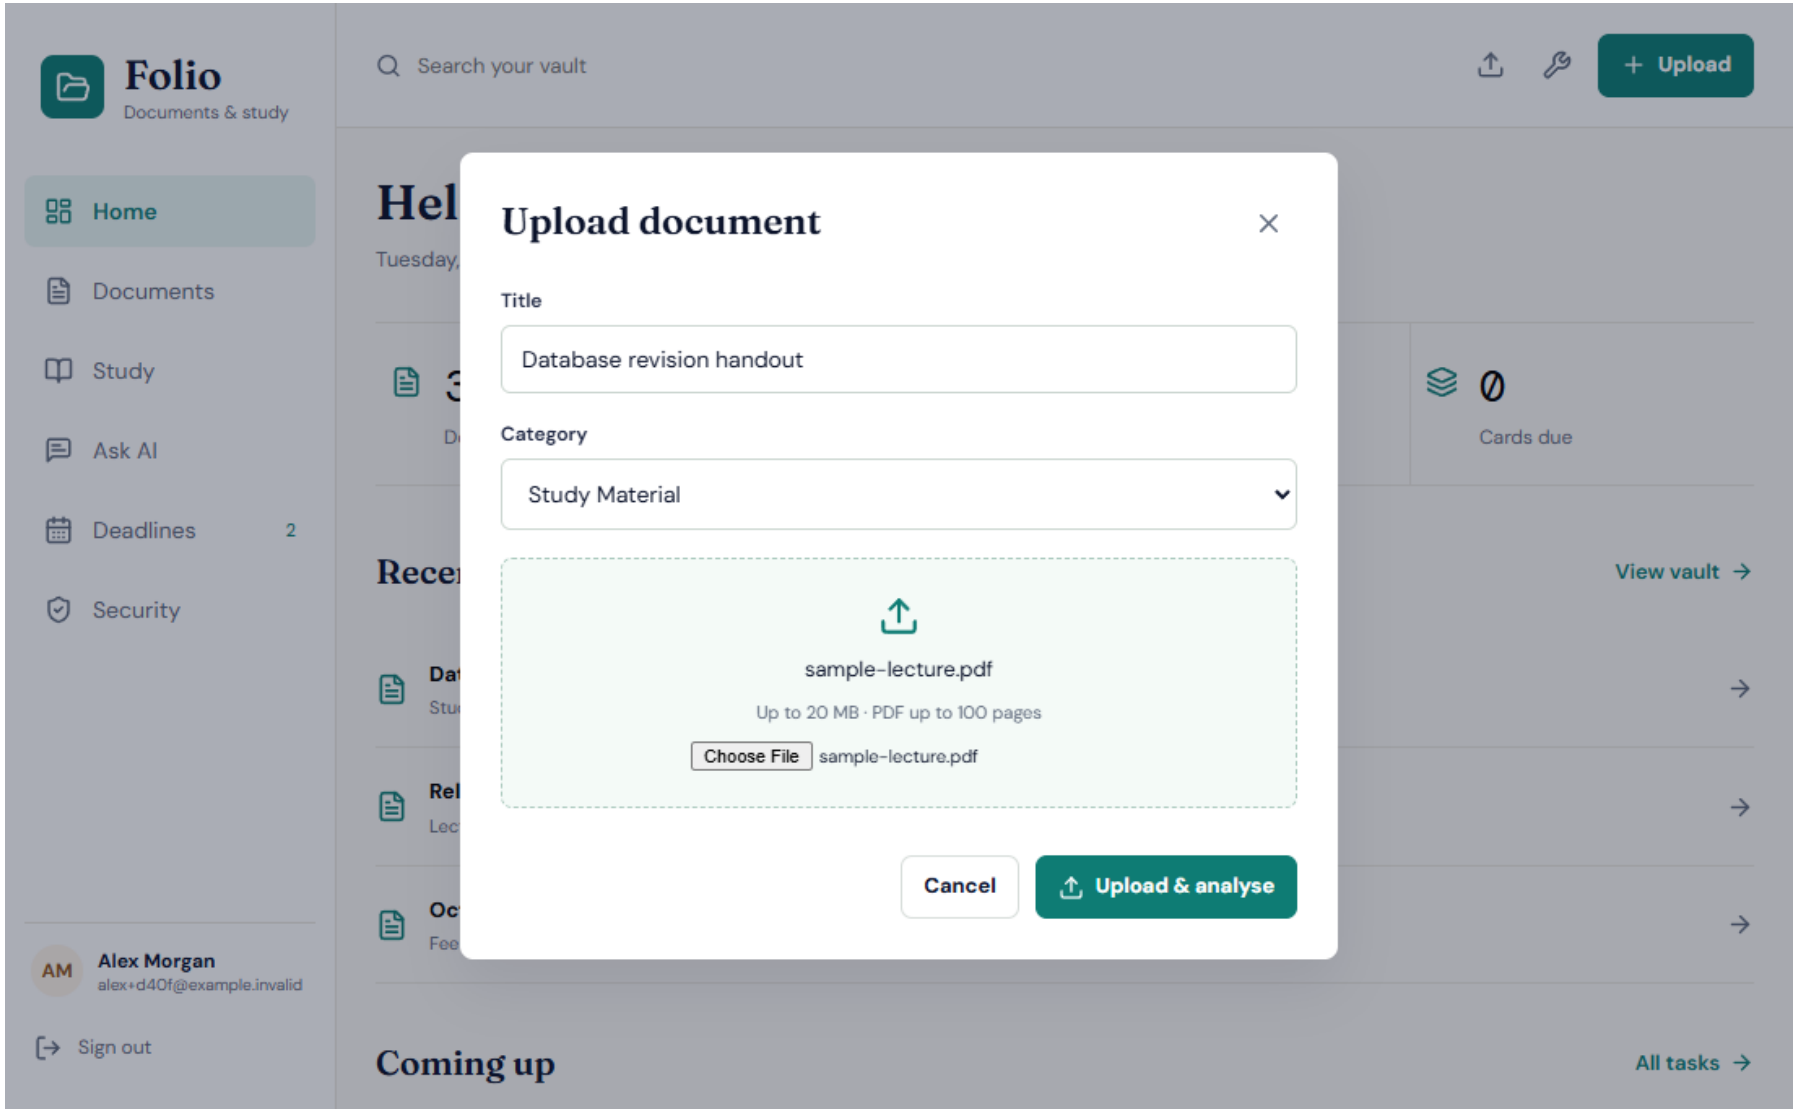

The browser includes vault, Study, AI, deadlines and security views.

1. Use the left navigation on desktop or the bottom navigation on a phone.
2. Use Upload and Document tools in the top bar.
3. Open Study to resume a course, notes, quiz or revision deck.

22. Upload in the Browser

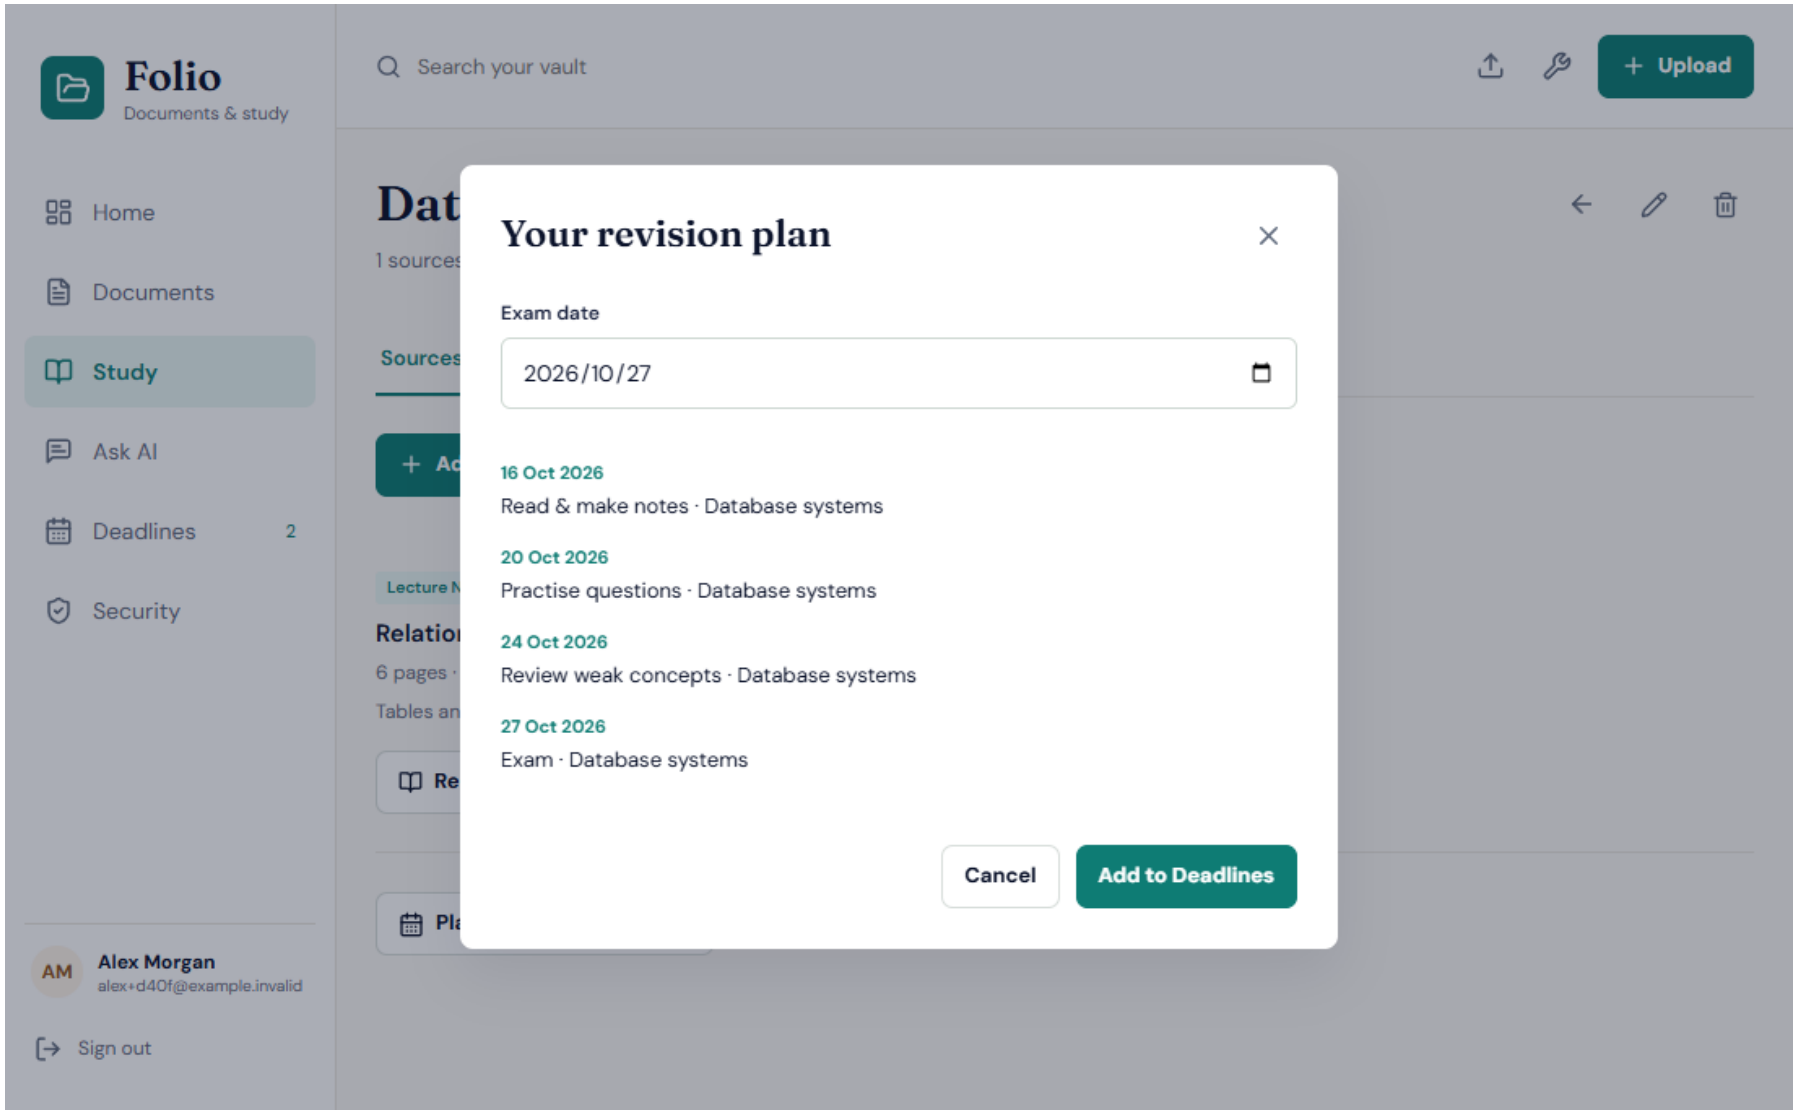

Add a PDF, DOCX, JPEG or PNG original to the shared vault.

1. Choose Upload, select a file, then set its title and category.
2. Choose Upload & analyse. Files must be within 20 MB; PDFs within 100 pages.
3. Keep working and use Upload activity to check progress. Wait for Ready before studying.

23. Plan Revision for an Exam

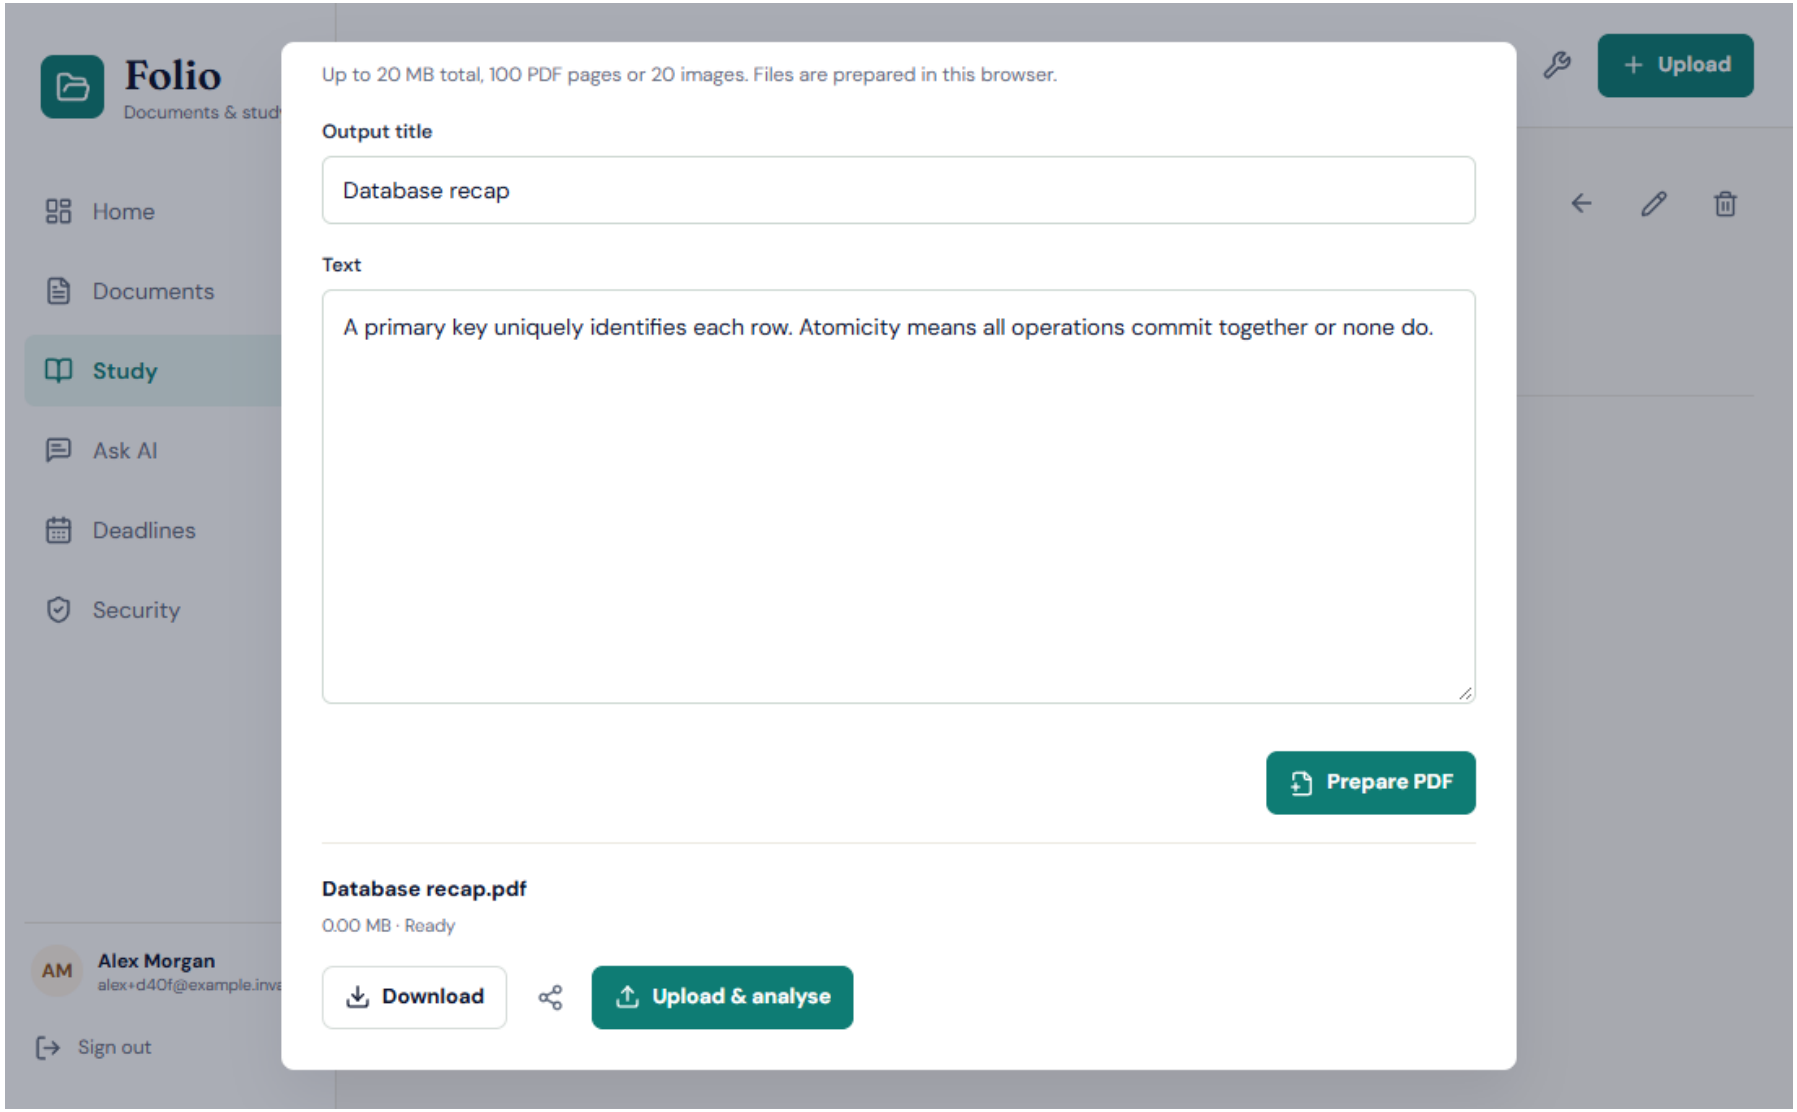

A revision plan creates tasks from the course sources.

1. Open the course Sources tab and choose Plan revision for an exam.
2. Enter the exam date and review the proposed revision tasks.
3. Create the plan, then inspect or edit the generated tasks in Deadlines.

24. Prepare a PDF in the Browser

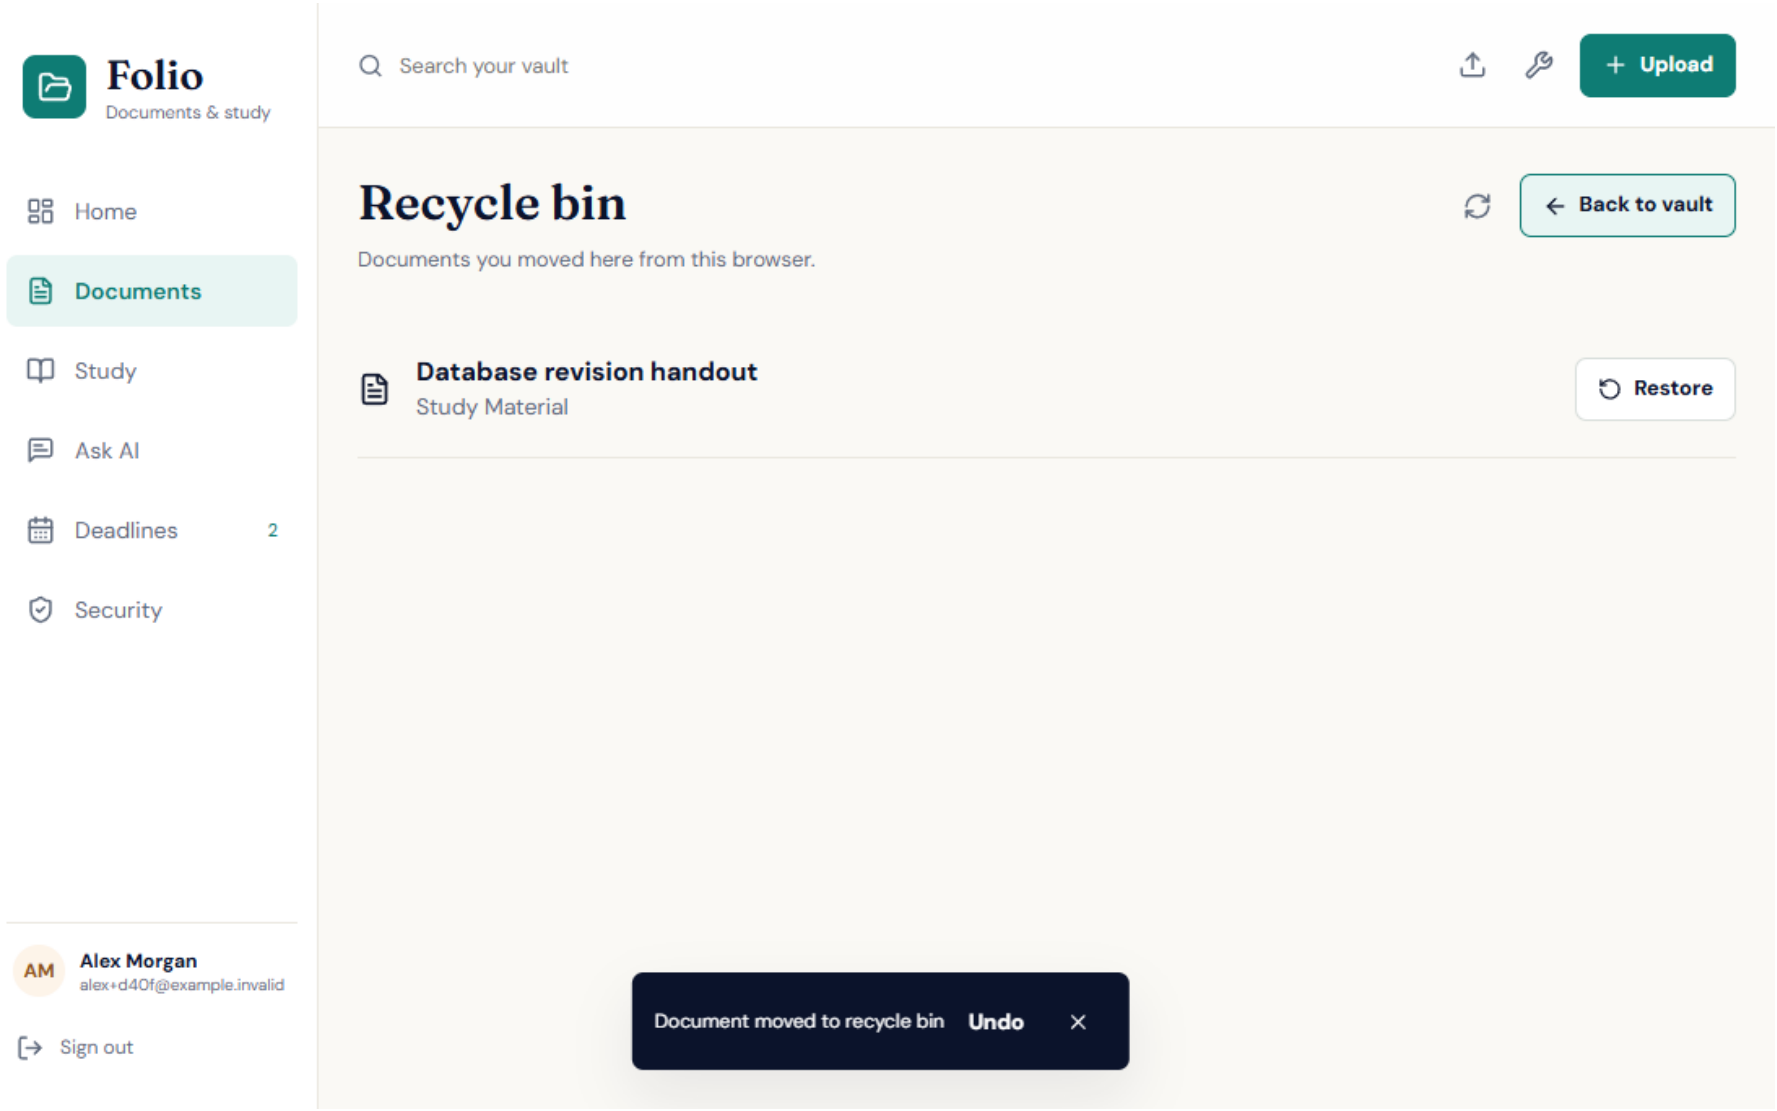

Document tools produce a local copy before any upload.

1. Choose a tool and supply files or text. Set an output title.
2. Reorder/remove pages or choose rotation where offered, then choose Prepare PDF.
3. Download/share the new PDF, or choose Upload & analyse to store it in your vault.

25. Restore a Document

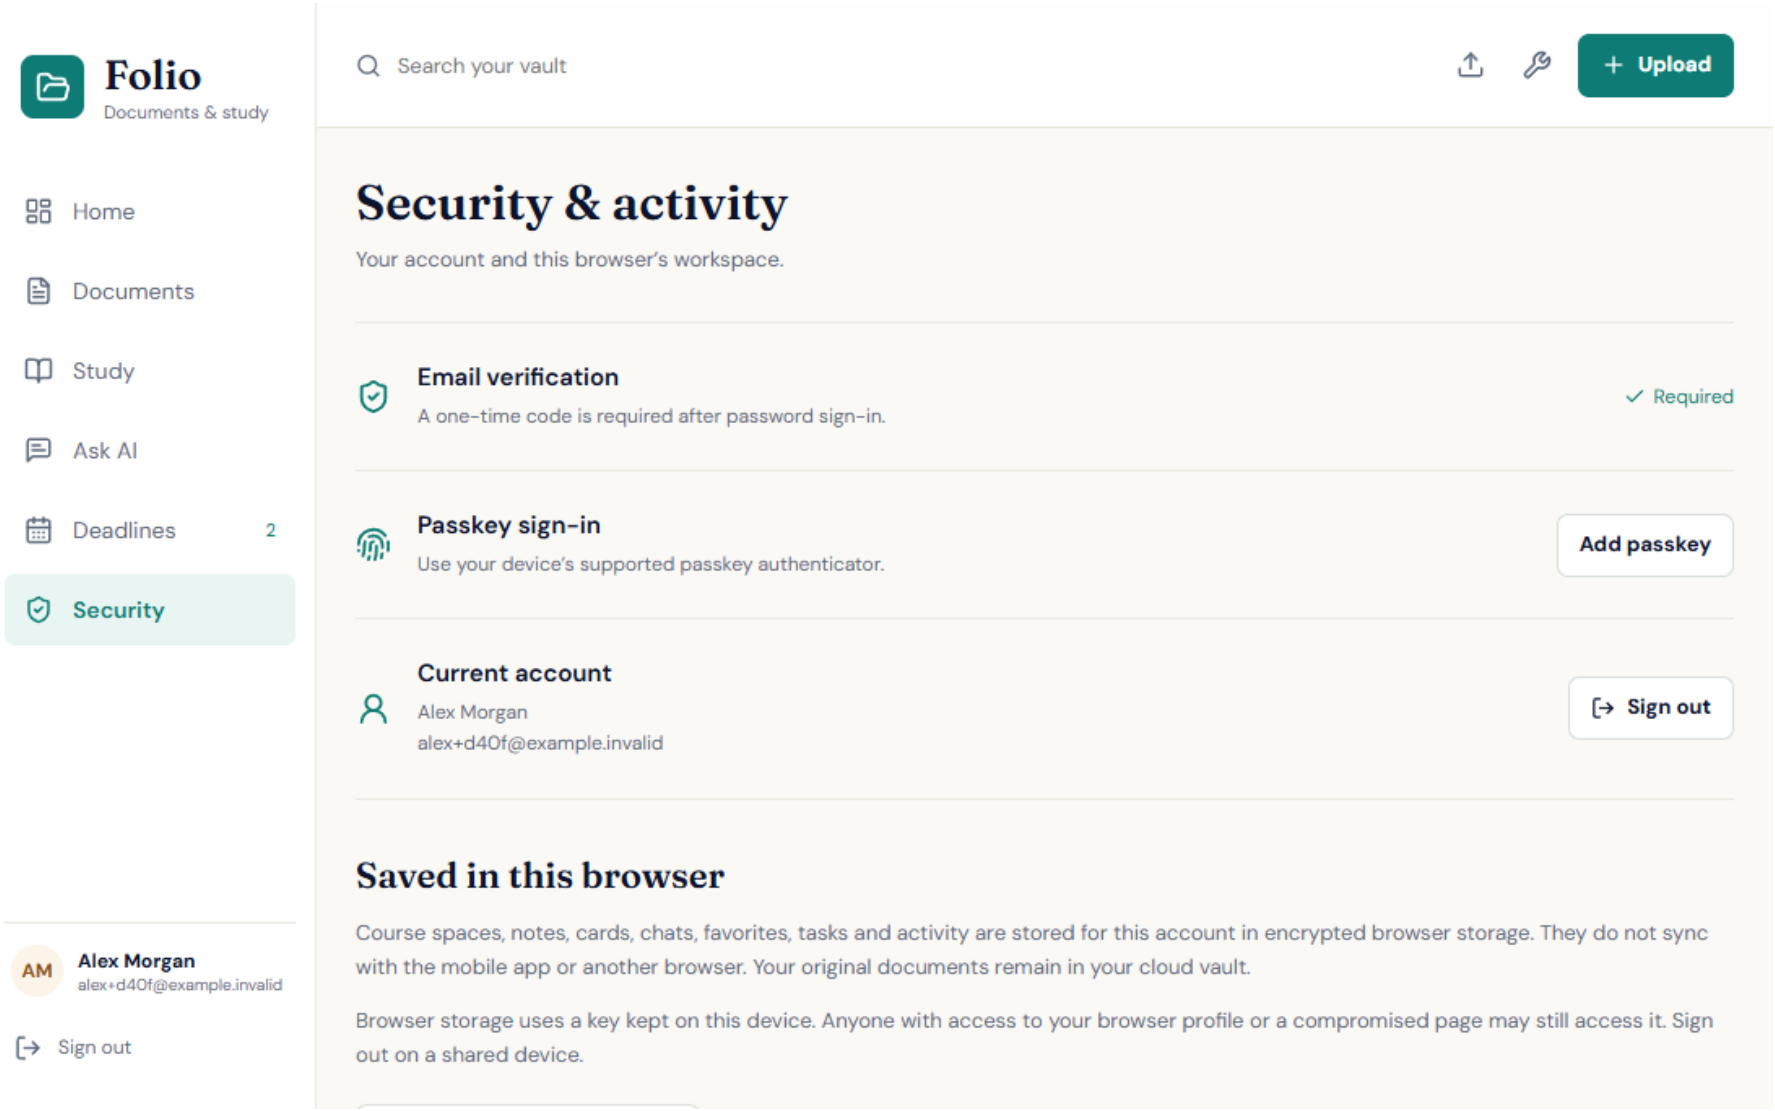

A document moved to the recycle bin can be restored.

1. In Documents, use the bin action and confirm the move.
2. Open Recycle bin to see documents moved there from this browser.
3. Choose Restore, then return to the vault and check the document.

26. Understand Browser Storage

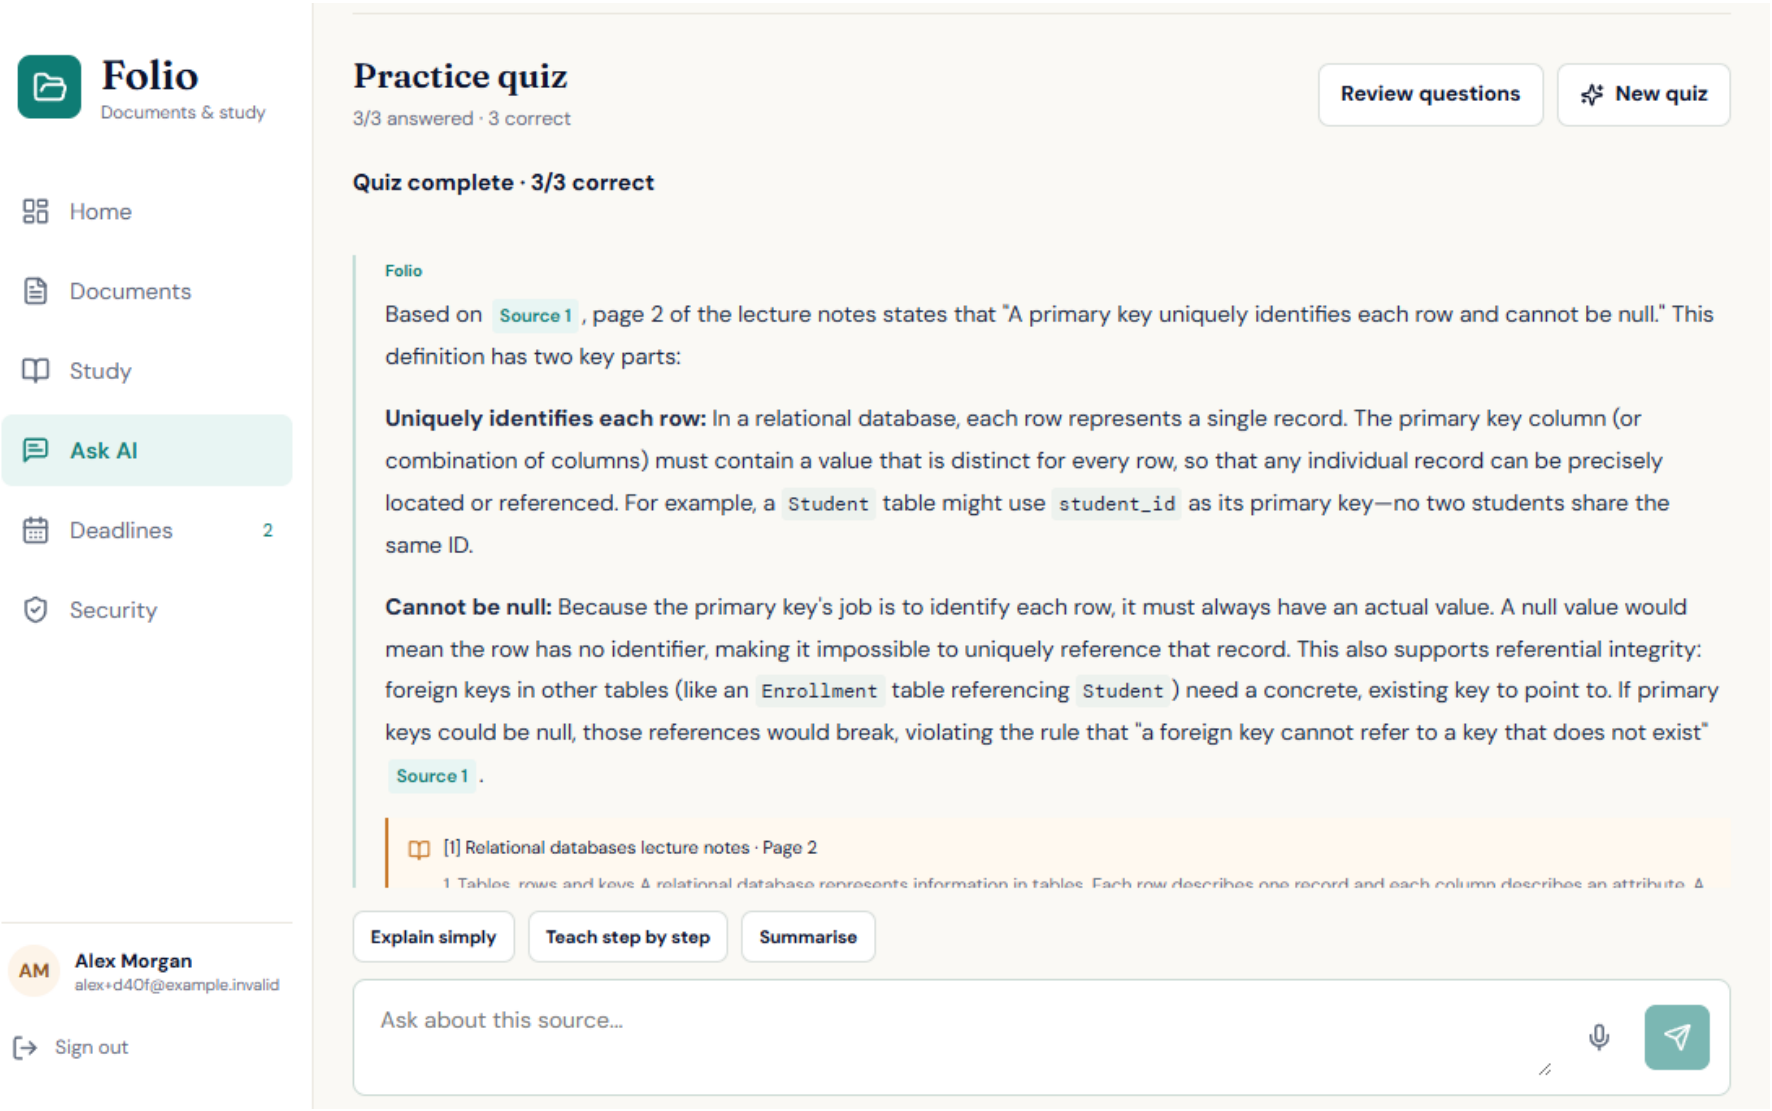

Original files and the browser workspace are stored differently.

1. Cloud originals use the shared vault; courses, notes, cards, chats and tasks stay in this browser.
2. Use exports for separate backups. Add passkey registers a supported account authenticator.
3. Sign out on shared devices. Clearing browser workspace removes local data, not cloud originals.

27. Save and Revisit an Answer

Source links keep an explanation connected to its evidence.

1. Choose a source before asking. Include a document title, page or passage if the answer abstains.
2. Open a numbered source link to check the original page.
3. Bookmark an answer, filter Saved answers, or save a sourced answer as a study note.

28. Use Folio on a Phone Browser

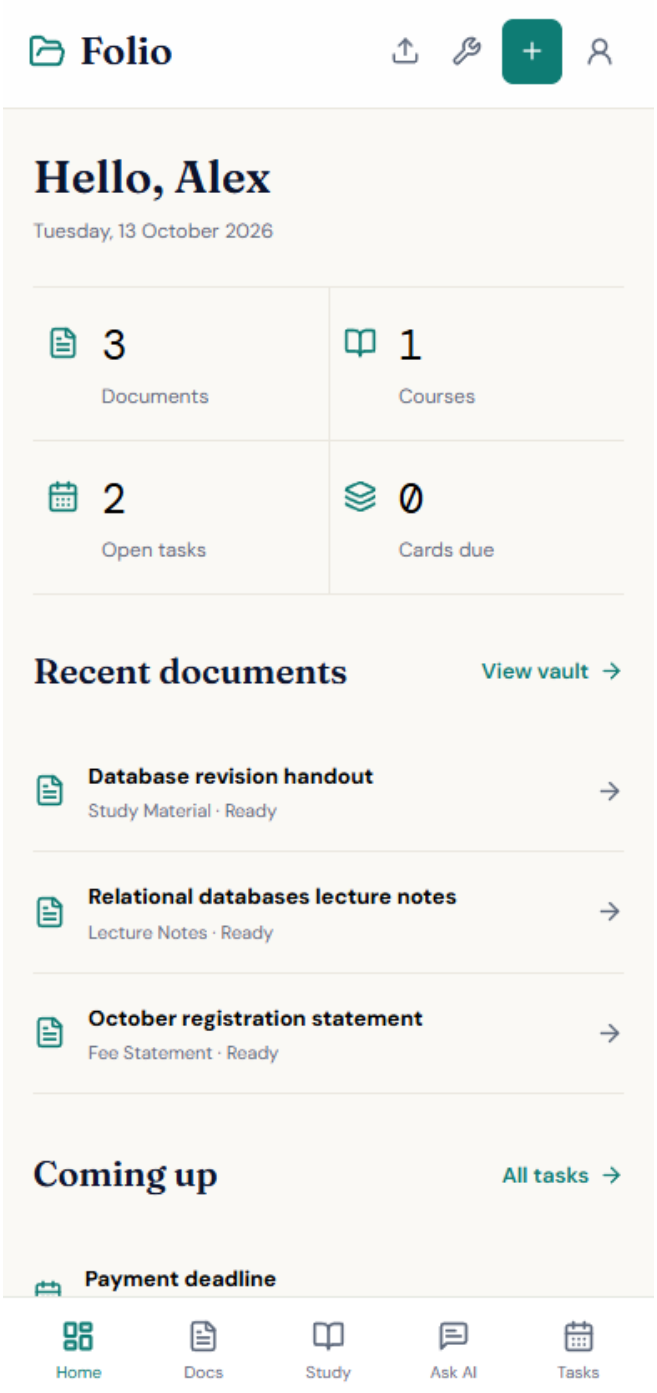

Figure 28. Phone web

The web workspace adapts its controls to a narrow screen.

1. Use Home, Docs, Study, Ask AI and Tasks in the bottom bar.

2. The plus icon opens Upload; the tool icon opens Document tools.

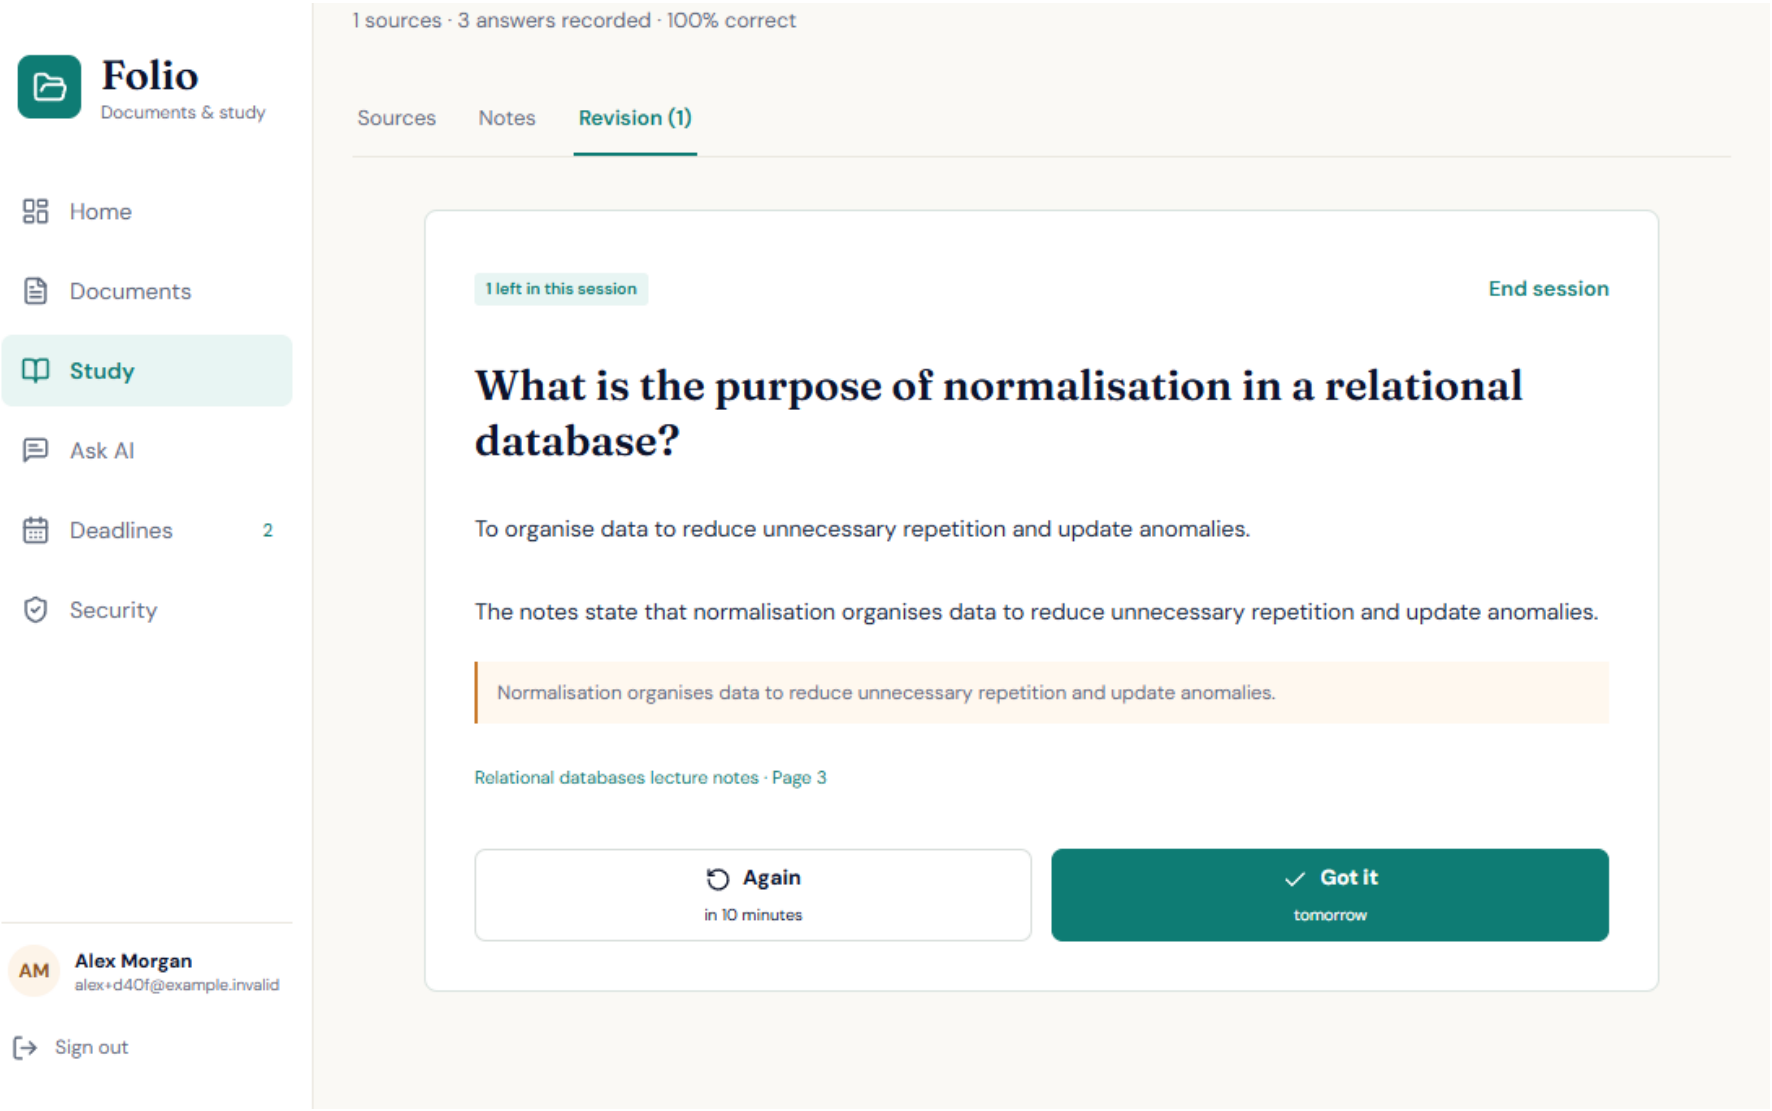

3. Use the account icon to open Security & activity or sign out.

Keep in Mind

The phone browser and native mobile app have separate local workspaces, even when using the same account.

29. Review Cards in the Browser

The browser revision deck follows the same recall-first workflow.

1. Open a course, choose Revision, then Review due cards.
2. Recall your answer before choosing Reveal answer. Open the source link when needed.
3. Choose Again in 10 minutes or Got it tomorrow to schedule the next review.

Help, Backups and Limits

A Quiz Does Not Generate

Check that the source is Ready and has readable text. Try a shorter round or another source, then retry. Provider outages and rate limits can still occur. Folio keeps the original unchanged and does not substitute invented questions.

An Answer Has No Reliable Source

Name the document, page or passage. Open the original if extraction is missing or uncertain. An abstention is not an answer to rely on; do not save it as evidence.

An Upload Is Still Processing

Use Upload activity or the vault status to check the job. Transient processing failures can retry while the browser/app remains active. Background execution depends on the browser and operating system; reopen the app to check recovery.

Back Up Local Work

Export notes and cards, conversations, tasks and activity when you need separate copies. Cloud originals are shared through the account, but local study work does not sync between mobile, another browser or another device. Clearing site data or reinstalling can remove local work.

Check Converted Files

Review page count, order and orientation after PDF tools run. DOCX conversion uses readable text and does not reproduce complex Word layout, embedded images or tables. Originals are not replaced by these tools.

Use the Screenshot Bundle

screenshots/ contains the unchanged PNG illustrations and additional desktop/phone views. Screenshot-Index.html opens the full-resolution gallery. screenshots.json lists dimensions, file hashes and manual usage. Keep the gallery beside its screenshots folder.
